

Single channel bus buffer gate

SN74LVC1G126

Product Data Sheet

AOTE DCC
RELEASE

◆ Summary :

The SN74LVC1G126 device is a single channel bus buffer gate with a three state output, which can operate within a supply voltage range of 1.65V to 5.5V. When the output enable pin OE input is at a high level, the output will be turned off. When the device is powered off, the loff circuit will disable the output to prevent backflow current from damaging the device. To ensure a high impedance state during power on or off, OE should be connected to GND through a pull-down resistor, and the minimum value of the resistor is determined by the current absorption capacity of the driver.

The device is packaged in SOT23-5 and SC70-5. The working temperature range is from -40°C ~ +125°C

◆ Product features

- Small Package: SOT23-5、 SC70-5
- Working voltage range: 2.0V~5.5V
- Low power consumption: 0.1μA (typical value)
- Working temperature range: -40°C ~ +125°C
- Input voltage up to 5.5V
- High Output driver: When powered by 3.0V, output driver $\pm 24\text{mA}$
- The locking performance exceeds 100mA;

◆ Applications

- Communication receiver
- Cable modem termination system
- Digital photo frame (DPF)
- High speed data acquisition and generation
- Motor control: high voltage
- Personal Navigation Device (GPS)
- Portable media player
- Video Communication System

◆ Packaging and Order Description

Product Name	Order Model	Temperature Range (°C)	boxed type	screen printing	MSL(3)	Packing Specification
SN74LVC1G126	SN74LVC1G126DCKR	-40°C ~ +125°C	SC70-5	CNK	MSL3	Tape and Reel, 3000
	SN74LVC1G126DBVR	-40°C ~ +125°C	SOT23-5	C265	MSL3	Tape and Reel, 3000

Attention:

- (1) This information is the latest data for the current version. If these data are updated, they will be promptly updated on our official website without further notice.
- (2) Silk screen printing may have additional codes for internal control traceability of products (including data codes and supplier codes) or marking the place of origin.
- (3) MSL, Humidity sensitivity level classified according to JEDEC industry standards.
- (4) equivalent SOT353

temperature parameter	Junction temperature, T _J		-65	150	°C
	Storage temperature range, T _{stg}		-65	150	

◆ **ESD level**

The following ESD information is only applicable to sensitive equipment operated within an anti-static protection zones

–	nominal value	Unit	 ESD sensitivity warning The scope of ESD damage can range from minor performance degradation to complete equipment failure. Precision integrated circuits may be more susceptible to damage as very small parameter changes can result in devices not meeting their published parameter specifications.
human model	±4000	V	
Charged Device Model	±1000		
Mechanical Model	±500		

Attention:

- (1) This only represents the limit values obtained by the product under testing conditions, and does not mean that the product can work normally under these conditions or other parameter conditions beyond the specifications. Exceeding the range specified by the absolute maximum rated value above will cause damage to the product, and it is impossible to predict the working state of the product outside of the above conditions. If the product operates under conditions other than those mentioned above for a long time, it may affect its performance.
- (2) If the input and output current ratings are followed, it may exceed the input and output negative voltage ratings.
- (3) The value of VCC is provided in the recommended working condition table.
- (4) The thermal impedance of the package is calculated according to JESD-51 standard:
- (5) The maximum power consumption is a function of T_J (MAX), R_{θJA}, and T_A. The maximum power consumption at any ambient temperature is P_o=(T_J (MAX) - T_A)/R_{θJA}, which is suitable for packaging directly soldered to PCB.

◆ Electrical Characteristics

(Within the natural ventilation temperature range (typical test conditions are: TA=+25 ° C, full temperature=-40 ° C~125 ° C)

(1) All unused input ports of the device must be kept at VCC or GND to ensure proper operation of the device.

(2) The limit value is 100% production testing conducted at 25°C. Ensure the limitation of the working temperature range by utilizing the correlation of statistical quality control (SQC) methods.

(3) Typical values represent the most likely parameter specifications determined during characterization. The actual typical values may vary over time and will also depend on the application and configuration.

Note: A. C_L includes probe and fixture capacitors.

B. Waveform 1 is used for outputs with internal conditions, where the output is low unless disabled by the output controller. Waveform 2 is used for outputs with internal conditions, where the output is high unless disabled by the output controller.

C. All input pulses are provided by a generator with the following characteristics: $PRR \leq 10MHz$, $Z_o = 50\Omega$

D. Output one measurement at a time, with a transition for each measurement.

E. T_{PLZ} and t_{PHZ} are the same as t_{dis} .

F. T_{PZL} and t_{PZH} are the same as t_{en} .

G. T_{PLH} and t_{PHL} are the same as t_{pd} .

H. Not all parameters and waveforms are applicable to all devices.
