

DESCRIPTION

The LTP3636 series of CMOS low dropout regulators are designed specifically for portable battery-powered applications which require ultra-low power consumption. The ultra-low quiescent current of only 0.8μA ensures features of long battery life, and the built-in dynamic transient boost improves the device transient response for wireless communication applications.

The LTP3636 series are available in SOT23-3L and SOT23-5L packages.

FEATURES

- 0.8 μA Ultra-Low Quiescent Current
- Output Voltage Range: 1.2V, 1.5V, 1.8V, 2.5V, 2.8V, 3.0V, 3.3V, and 3.6V
- Operating Input Voltage Range: 2.0V to 5.5V
- Low Dropout: 170mV Typically at 150mA Load and 1.8V Output
- High Output Voltage Accuracy: ±1.5%
- Stable with 1μF Ceramic Capacitors
- Over-Current Protection
- Thermal Shutdown Protection
- With Auto Discharge Function at Off State

APPLICATIONS

- Battery Powered Equipments
- Portable Communication Equipments
- Cameras, Image Sensors and Camcorders
- Label Information

ORDER INFORMATION

Model	Package	Ordering Number ^{Note1}	Packing Option
LTP3636	SOT23	LTP3636-xxYT3	Tape and Reel, 3000
	SOT23-5L	LTP3636-xxYT5	Tape and Reel, 3000

Note1: xx stands for output voltage, e.g. if xx = 18, the output voltage is 1.8V; if xx = 30, the output voltage is 3.0V.

PIN CONFIGURATION (Top View)

SOT23-3L

SOT23-5L

PIN DESCRIPTIONS

Pin		Symbol	Description
SOT23-3	SOT23-5		
3	1	IN	Power Supply Input Voltage
1	2	GND	Ground.
/	3	NC	No Connection.
/	4	NC	No Connection.
2	5	OUT	Output Pin

ABSOLUTE MAXIIMUM RATINGS

Parameter	Symbol	Value	Unit
Input Voltage	V _{IN}	6.5	V
Output Voltage	V _{OUT}	-0.3 to V _{IN} + 0.3	V
Operating Junction Temperature	T _J	150	°C
Storage Temperature	T _{STG}	-55 to 150	°C
Thermal Characteristics, Thermal Resistance, Junction-to-Air	R _{θJA}	SOT23-3L	357
		SOT23-5L	250
Human Body Model	ESD	6000	V
ESD Capability		2000	V
Current Maximum Rating	Latch up	200	mA

NOTE:Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

CAUTION

This integrated circuit can be damaged by ESD if you don't pay attention to ESD protection. LINEARIN recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

LINEARIN reserves the right to make any change in circuit design, specification or other related things if necessary without notice at any time. Please contact LINEARIN sales office to get the latest datasheet.

RECOMMENDED OPERATING CONDITIONS

Symbol	Item	Rating	Unit
V_{IN}	Input Voltage	2.0 to 5.5	V
I_{OUT}	Output Current	0 to 300	mA
T_A	Operating Ambient Temperature	-40 to 85	°C
C_{IN}	Effective Input Ceramic Capacitor Value	0.47 to 4.7	μF
C_{OUT}	Effective Output Ceramic Capacitor Value	0.47 to 4.7	μF

ELECTRICAL CHARACTERISTICS

$V_{IN} = 2.5\text{ V}$, $I_{OUT} = 1\text{ mA}$, $C_{IN} = 1\text{ μF}$, $C_{OUT} = 1\text{ μF}$, $T_A = +25\text{ °C}$, unless otherwise noted.

Symbol	Parameter	Test Conditions	Min	Typ	Max	Unit
V_{IN}	Operating Input		2.0		5.5	V
V_{OUT}	Output Voltage	$T_A = +25\text{ °C}$	-1.5		+1.5	%
		$-40\text{ °C} \leq T_A \leq 85\text{ °C}$	-2.5		+2.5	
I_Q	Quiescent Current	$I_{OUT} = 0\text{ mA}$		0.8	1.1	μA
$Line_{Reg}$	Line Regulation	$2.5\text{ V} \leq V_{IN} \leq 5.5\text{ V}$, $I_{OUT} = 1\text{ mA}$		0.1	0.2	%/V
$Load_{Reg}$	Load Regulation	$1\text{ mA} \leq I_{OUT} \leq 150\text{ mA}$, $V_{IN} = 2.5\text{ V}$		20		mV
V_{DROP}	Dropout Voltage	$I_{OUT} = 150\text{ mA}$		170		mV
I_{LMT}	Current Limit			300	550	mA
I_{SHORT}	Short Circuit Current	$V_{OUT} = 0\text{ V}$		90		mA
PSRR	Power supply Rejection Ratio	$I_{OUT} = 100\text{ mA}$	$f = 1\text{ kHz}$	-55		dB
			$f = 10\text{ kHz}$	-52		
e_N	Output Noise Voltage	$V_{IN} = 2.5\text{ V}$, $I_{OUT} = 1\text{ mA}$, $f = 10\text{ Hz to }100\text{ kHz}$, $C_{OUT} = 1\text{ μF}$		100		μVrms

APPLICATION CIRCUITS

Applications Information

General

The LTP3636 is a high performance 300mA Linear Regulator with Ultra Low I_Q . This device delivers low Noise and high Power Supply Rejection Ratio with excellent dynamic performance due to employing the Dynamic Quiescent Current adjustment which assure ultra low I_Q consumption at no-load state. These parameters make the LTP3636 device very suitable for various battery powered applications.

Input Decoupling (C_{IN})

It is recommended to connect at least a 1µF Ceramic X5R or X7R capacitor between IN and GND pins of the device. This capacitor will provide a low impedance path for any unwanted AC signals or Noise superimposed onto constant Input Voltage. The good input capacitor will limit the influence of input trace inductances and source resistance during sudden load current changes.

Higher capacitance and lower ESR Capacitors will improve the overall line transient response.

Output Decoupling (C_{OUT})

The LTP3636 does not require a minimum Equivalent Series Resistance (ESR) for the output capacitor. The X5R and X7R types have the lowest capacitance variations over temperature thus they are recommended. There is recommended connect the output capacitor as close as possible to the output pin of the regulator.

Current Limit Protection

When output current at the OUT pin is higher than current limit threshold, the current limit protection will be triggered and clamp the output current to approximately 550mA to prevent over-current and to protect the regulator from damage due to overheating.

Thermal Shutdown

When the die temperature exceeds the Thermal Shutdown point (TSD =160°C typically) the device goes to disabled state and the output voltage is not delivered until the die temperature decreases to 150°C. The Thermal Shutdown feature provides a protection from a catastrophic device failure at accidental overheating. This protection is not intended to be used as a substitute for proper heat sinking.

Power Dissipation and Heat sinking

The maximum power dissipation supported by the device is dependent upon board design and layout. Mounting pad configuration on the PCB, the board material and the ambient temperature affect the rate of junction temperature rise for the part. The maximum power dissipation the LTP3636 device can handle is given by:

$$P_{D(MAX)} = \frac{[T_{J(MAX)} - T_A]}{P_{\theta JA}} \quad (\text{eq.1})$$
