Features

- NEW LM339B and LM2901B
- Improved specifications of B-version
 - Maximum rating: up to 38 V
 - ESD rating (HBM): 2k V
 - Low input offset: 0.37 mV
 - Low input bias current: 3.5 nA
 - Low supply-current: 200 μ A per comparator
 - Faster response time of 1 μ sec
 - Extended temperature range for LM339B
- B-version is drop-in replacement for LM239, LM339 and LM2901, A and V versions
- Common-mode input voltage range includes ground
- Differential input voltage range equal to maximum-rated supply voltage: ± 38 V
- Low output saturation voltage
- Output compatible with TTL, MOS, and CMOS
- For single version, see the TL331B
- For dual version, see the LM393B or LM2903B

Pin Diagram

Description

The LM339B and LM2901B devices are the next generation versions of the industry-standard LM339 and LM2901 comparator family. These next generation B-version comparators feature lower offset voltage, higher supply voltage capability, lower supply current, lower input bias current, lower propagation delay, and improved 2 kV ESD performance and input ruggedness through dedicated ESD clamps. The LM339B and LM2901B can drop-in replace the LM239, LM339 and LM2901, for both "A" and "V" grades.

All devices consist of four independent voltage comparators that are designed to operate from a single power supply over a wide range of voltages.

Applications

- Vacuum robot
- Single phase UPS
- Server PSU
- Cordless power tool
- Wireless infrastructure
- Appliances
- Building automation
- Factory automation & control
- Motor drives
- Infotainment & cluster

Absolute Maximum Ratings for LM339B and LM2901B

over operating free-air temperature range (unless otherwise noted) (1)

	MIN	MAX	UNIT
Supply voltage: $V_s = (V_+) - (V_-)$	-0.3	38	V
Differential input voltage: $V_{ID}(2)$		± 38	V
Input pins (IN_+ , IN_-)	-0.3	38	V
Current into input pins (IN_+ , IN_-)		-50	mA
Output pin (OUT)	-0.3	38	V
Output sink current		25	mA
Output short-circuit duration(3)		Unlimited	s
Junction temperature, T_j	TBD	150	°C
Storage temperature, T_{stg}	-65	150	°C

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) Differential voltages are at IN_+ with respect to IN_- .

(3) Short circuits from outputs to V_+ can cause excessive heating and eventual destruction.

Absolute Maximum Ratings for Non-B Versions

over operating free-air temperature range (unless otherwise noted)(1)

	MIN	MAX	UNIT
V_{CC} Supply voltage(2)		36	V
V_{ID} Differential input voltage(3)		± 36	V
V_i Input voltage range(either input)	-0.3	36	V
I_k Input current(5)		-50	mA
V_o Output voltage		36	V
I_o Output current		20	mA
Duration of output short circuit to ground(4)	Unlimited		
T_j Operating virtual-junction temperature		150	°C
Case temperature for 60 s	FK package	260	°C
Lead temperature 1.6 mm (1/16 in) from case for 60 s	Jpackage	300	°C
T_{stg} Storage temperature	-65	150	°C

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) All voltage values, except differential voltages, are with respect to network ground.

(3) Differential voltages are at xIN_+ with respect to xIN_- .

(4) Short circuits from outputs to V_{CC} can cause excessive heating and eventual destruction.

(5) Input current flows through parasitic diode to ground and will turn on parasitic transistors that will increase I_{CC} and can cause output be incorrect. Normal operation resumes when input is removed.

- (1) The voltage at either input should not be allowed to go negative by more than 0.3 V otherwise output may be incorrect and excessive input current can flow. The upper end of the common-mode voltage range is limited by $V_{CC} - 2\text{V}$. However only one input needs to be in the valid common mode range, the other input can go up the maximum V_{CC} level and the comparator provides a proper output state. Either or both inputs can go to maximum V_{CC} level without damage.
- (2) This parameter is ensured by design and/or characterization and is not tested in production.

Response time	RL connected to 5V through 5.1k Ω ,CL=15 pF(1)(2)	100-mV input step with 5-mV	1.3	μs
		TTL-level input step	0.3	

(1) CL includes probe and jig capacitance.

(2) The response time specified is the interval between the input step function and the instant when the output crosses 1.4 V

The following list describes the outcomes of some input voltage situations.

- When both $IN -$ and $IN +$ are both within the common-mode range:
 - If $IN -$ is higher than $IN +$ and the offset voltage, the output is low and the output transistor is sinking current
 - If $IN -$ is lower than $IN +$ and the offset voltage, the output is high impedance and the output transistor is not conducting
- When $IN -$ is higher than common mode and $IN +$ is within common mode, the output is low and the output transistor is sinking current
- When $IN +$ is higher than common mode and $IN -$ is within common mode, the output is high impedance and the output transistor is not conducting
- When $IN -$ and $IN +$ are both higher than common mode, the output is low and the output transistor is sinking current

- TUDI Semiconductor reserves the right to modify the product manual without prior notice! Before placing an order, customers need to confirm whether the obtained information is the latest version and verify the completeness of the relevant information.
- Any semi-guide product is subject to failure or malfunction under specified conditions. It is the buyer's responsibility to comply with safety standards when using TUDI Semiconductor products for system design and whole machine manufacturing. And take the appropriate safety measures to avoid the potential in the risk of loss of personal injury or loss of property situation!
- TUDI Semiconductor products have not been licensed for life support, military, and aerospace applications, and therefore TUDI Semiconductor is not responsible for any consequences arising from the use of this product in these areas.
- If any or all TUDI Semiconductor products (including technical data, services) described or contained in this document are subject to any applicable local export control laws and regulations, they may not be exported without an export license from the relevant authorities in accordance with such laws.
- The specifications of any and all TUDI Semiconductor products described or contained in this document specify the performance, characteristics, and functionality of said products in their standalone state, but do not guarantee the performance, characteristics, and functionality of said products installed in Customer's products or equipment. In order to verify symptoms and conditions that cannot be evaluated in a standalone device, the Customer should ultimately evaluate and test the device installed in the Customer's product device.
- TUDI Semiconductor documentation is only allowed to be copied without any alteration of the content and with the relevant authorization. TUDI Semiconductor assumes no responsibility or liability for altered documents.
- TUDI Semiconductor is committed to becoming the preferred semiconductor brand for customers, and TUDI Semiconductor will strive to provide customers with better performance and better quality products.
