

MLX92221-AAA

2-Wire Hall Effect Latch

Features and Benefits

- Wide operating voltage range: from 2.7V to 24V
- Integrated self-diagnostics
- Chopper-stabilized amplifier stage
- Programmable Built-in negative temperature coefficient
- Reverse Supply Voltage Protection
- Under-Voltage Lockout Protection
- Thermal Protection
- High ESD rating / Excellent EMC performance

Applications

- Automotive, Consumer and Industrial
- Wiper motor
- Window lifter
- Seatbelt buckle
- Seat positioning
- Sunroof/Tailgate opener
- Electrical power steering

1. Functional Diagram

2. General Description

The Melexis MLX92221 is a new generation of Hall-effect switches designed in mixed signal submicron CMOS technology.

The device integrates a voltage regulator, Hall sensor with advanced offset cancellation system and a current sink-configured output driver, all in a single package.

Based on a brand new platform, the magnetic core is using an improved offset cancellation system allowing faster and more accurate processing while being temperature insensitive and stress independent. In addition a temperature coefficient is implemented to compensate the natural behaviour of certain types of magnets becoming weaker with rise in temperature.

The included voltage regulator operates from 2.7 to 24V, hence covering a wide range of applications. With the built-in reverse voltage protection, a serial resistor or diode on the supply line is not required so that even remote sensors can be specified for low voltage operation down to 2.7V while being reverse voltage tolerant.

In an event of a drop below the minimum supply voltage during operation, the under-voltage lock-out protection will automatically freeze the device, preventing the electrical perturbation to affect the magnetic measurement circuitry. The output current state is therefore only updated based on a proper and accurate magnetic measurement result.

The two-wire interface not only saves one wire, but also allows implementation of diagnostic functions as reverse polarity connection and malfunction detection. The on-chip thermal protection also switches off the output if the junction temperature increases above an abnormally high threshold. It will automatically recover once the temperature decreases below a safe value.

With latching magnetic characteristics the supply current state is turned high by a sufficiently strong South Pole facing the package branded side. Toggling the state of the supply current from high to low is possible by applying low or no magnetic field.

The MLX92221 is delivered in a Green and RoHS compliant Plastic Single-in-Line (TO-92 flat) for through-hole mount or PCB-less design or in 3-pin Thin Small Outline Transistor (TSOT) for surface mount process

4. General Electrical Specifications

DC Operating Parameters $V_{DD} = 2.7$ to $24V$, $T_j = -40^{\circ}C$ to $165^{\circ}C$ (unless otherwise specified)

Parameter	Symbol	Test Conditions	Min	Typ ⁽¹⁾	Max	Units
Supply Voltage	V_{DD}	Operating	2.7	-	24	V
Reverse Supply Current	I_{DDREV}	$V_{DD} = -16V$			1	mA
OFF Supply Current	I_{OFFLOW}	$V_{DD} = 3.5$ to $24V$	2	3.3	5	mA
OFF Supply Current	$I_{OFFHigh}$	$V_{DD} = 3.5$ to $24V$	5	6	6.9	mA
ON Supply Current	I_{ON}	$V_{DD} = 3.5$ to $24V$	12	14.5	17	mA
Safe Mode Supply Current	I_{TP}	Thermal Protection activated	-	-	0.8	mA
Supply Current Rise/Fall Time ⁽²⁾	$t_{RISE/FALL}$	$V_{DD} = 12V$, $C_{LOAD} = 50pF$ to GND	0.1	0.3	1	μs
Power-On Time ^(3,4,5)	t_{ON}	$V_{DD} = 5V$, $dV_{DD}/dt > 2V/\mu s$	-	40	70	μs
Chopping Frequency	f_{CHOP}		260	340	-	kHz
Delay time ^(2,6)	t_D	Average value for 1000 successive switching events @10kHz, Square wave with $B \geq 3 \cdot B_{OPMAX}$, $t_{RISE} = t_{FALL} \leq 20\mu s$	-	7.5	-	μs
Output Jitter (p-p) ^(2,7)	t_{JITTER}	Square wave with $B \geq 3 \cdot B_{OPMAX}$ over 1000 successive switching events @1kHz	-	± 3.3	-	μs
Maximum Switching Frequency ^(2,8)	f_{SW}	$B \geq 3 \cdot B_{OPMAX}$ and square wave magnetic field	30	50	-	kHz
Under-voltage Lockout Threshold	V_{UVL}		-	2	2.7	V
Under-voltage Lockout Reaction time ⁽²⁾	t_{UVL}		-	1	-	μs
Thermal Protection Threshold	T_{PROT}	Junction temperature	-	190 ⁽⁹⁾	-	$^{\circ}C$
Thermal Protection Release	T_{REL}	Junction temperature	-	180 ⁽⁹⁾	-	$^{\circ}C$
Safe Mode Supply Current	I_{TP}	Thermal Protection activated	-	-	0.8	mA
UA Package Thermal Resistance	R_{TH}	Single layer (1S) Jedec board, zero LFPM		200		$^{\circ}C/W$
TSOT Package Thermal Resistance	R_{TH}	Single layer (1S) Jedec board, zero LFPM		300		$^{\circ}C/W$

¹ Typical values are defined at $T_A = +25^{\circ}C$ and $V_{DD} = 12V$

² Guaranteed by design and verified by characterization, not production tested

³ The Power-On Time represents the time from reaching $V_{DD} = V_{POR}$ to the first refresh of the supply current state.

⁴ Power-On Slew Rate is not critical for the proper device start-up.

⁵ $B > B_{OPmax} + 1$ mT for direct output sensors, or $B < B_{RPmin} - 1$ mT.

⁶ Delay Time is the time from magnetic threshold reached to the start of the supply current switching.

⁷ Output jitter is the unpredictable deviation of the Delay time

⁸ Maximum switching frequency corresponds to the maximum frequency of the applied magnetic field which is detected without loss of pulses

⁹ T_{PROT} and T_{REL} are the corresponding junction temperature values.

7.6. I_{ON} vs. V_{DD}

7.7. V_{DD} de-rating

7.8. Power de-rating

8. Application Information

8.1. Typical Automotive Application Circuit

1. For proper operation, a 10nF bypass should be placed as close as possible to the V_{DD} and ground.
For complete emissions protection a $C1 = 68nF$ is Recommended.
2. The test pin is to be left open or connected to GND.

8.2. Automotive and Harsh, Noisy Environments Application Circuit

Notes:

1. For proper operation, a 10nF to 100nF bypass capacitor should be placed as close as possible to the V_{DD} and ground pin.
2. The device could tolerate negative voltage down to -24V, so if negative transients over supply line $V_{PEAK} < -29V$ are expected, usage of the diode D1 is recommended. Otherwise only R_{SENSE} is sufficient.

When selecting the resistor R_{SENSE} , three points are important:

- the resistor has to limit I_{DD}/I_{DDREV} to 50mA maximum
- the resistor has to withstand the power dissipated in both over voltage conditions (V_{SENSE}^2/R_{SENSE})
- the resulting device supply voltage V_{DD} has to be higher than $V_{DD\ min}$ ($V_{DD} = V_{CC} - R_{SENSE} \cdot I_{DD}$)

3. The device could tolerate positive supply voltage up to +27V (until the maximum power dissipation is not exceeded), so if positive transients over supply line with $V_{PEAK} > 32V$ are expected, usage a zener diode DZ1 is recommended. The R_{SENSE} -DZ1 network should be sized to limit the voltage over the device below the maximum allowed.

8.3. Strobing V_{DD} application (used for reduced self-heating)

Notes:

1. Given strobe timing is exemplary only.
2. For proper operation, a 10nF to 100nF bypass capacitor should be placed as close as possible to the V_{DD} and ground pin.

Standard information regarding manufacturability of Melexis products with different soldering processes

Our products are classified and qualified regarding soldering technology, solderability and moisture sensitivity level according to following test methods:

Reflow Soldering SMD's (Surface Mount Devices)

- IPC/JEDEC J-STD-020
Moisture/Reflow Sensitivity Classification for Nonhermetic Solid State Surface Mount Devices (classification reflow profiles according to table 5-2)
- EIA/JEDEC JESD22-A113
Preconditioning of Nonhermetic Surface Mount Devices Prior to Reliability Testing (reflow profiles according to table 2)

Wave Soldering SMD's (Surface Mount Devices) and THD's (Through Hole Devices)

- EN60749-20
Resistance of plastic- encapsulated SMD's to combined effect of moisture and soldering heat
- EIA/JEDEC JESD22-B106 and EN60749-15
Resistance to soldering temperature for through-hole mounted devices

Iron Soldering THD's (Through Hole Devices)

- EN60749-15
Resistance to soldering temperature for through-hole mounted devices

Solderability SMD's (Surface Mount Devices) and THD's (Through Hole Devices)

- EIA/JEDEC JESD22-B102 and EN60749-21
Solderability

For all soldering technologies deviating from above mentioned standard conditions (regarding peak temperature, temperature gradient, temperature profile etc) additional classification and qualification tests have to be agreed upon with Melexis.

The application of Wave Soldering for SMD's is allowed only after consulting Melexis regarding assurance of adhesive strength between device and board.

<http://www.melexis.com/Assets/Soldering-Application-Note-and-Recommendations-5446.aspx>

Melexis is contributing to global environmental conservation by promoting **lead free** solutions. For more information on qualifications of **RoHS** compliant products (RoHS = European directive on the Restriction Of the use of certain Hazardous Substances) please visit the quality page on our website: <http://www.melexis.com/quality.aspx>

9. ESD Precautions

Electronic semiconductor products are sensitive to Electro Static Discharge (ESD).

Always observe Electro Static Discharge control procedures whenever handling semiconductor products.

10. Package Information

10.1. UA (TO92 - 3L)

- Notes:
- 1. All dimensions are in millimeters
 - 2. Package dimension exclusive molding flash.
 - 3. The end flash shall not exceed 0.127 mm on the top side.
- Marking:
- 1st Line : xxx – last three digits from lot number
- 2nd Line : yww
- y - last digit of year
- ww - calendar week

Hall plate location

- Notes:
- 1. All dimensions are in millimeters
 - 2. Mold flashes and protrusion are not included.
