Air Cylinder [ISO 6432 and CETOP RP52P]

Ø (mm)	8	10	12	16	20	25	32	40	50	63	80	100	125	160	200	250
--------	---	----	----	----	----	----	----	----	----	----	----	-----	-----	-----	-----	-----

Specifications ¹⁾

Action	Double acting
Fluid	Air
Maximum operating pressure	1.0 MPa
Minimum operating pressure	0.05 MPa
Ambient and fluid temperature	Without auto switch: -20 to 70 °C (No freezing) With auto switch: -10 to 60 °C (No freezing)
Piston speed	50 to 1500 mm/s
Cushion	Rubber cushion, Air cushion
Port size	(ø8, ø10, ø12, ø16): M5; (ø20, ø25): G1/8

1) Please refer also to the detailed specification in chapter C85.

How to Order ¹⁾

1) For further cylinder variation please refer to chapter C85.

C85 Standard Stroke Variation with Rubber Cushion applicable for auto-switch ¹⁾

Auto Switches

Auto-switch for C85 (24VDC)¹⁾

How to order	Description ²⁾
D-M9PL	Solid state switch (PNP) with 3m cable, LED.
D-M9PSAPC	Solid state switch (PNP) with M8 (3-pin) connector, LED.
D-M9PSBPC	Solid state switch (PNP) with M8 (4-pin) connector, LED.
D-M9PSDPC	Solid state switch (PNP) with M12 connector, LED.
D-C73L	Reed switch with 3m cable, LED.

- 1) For further auto switch variation please refer to chapter C85.
2) Please refer also to the detailed Specification in chapter C85.

Series C76

Air Cylinder

Specifications ¹⁾

Action	Double acting
Fluid	Air
Maximum operating pressure	1.0 MPa
Minimum operating pressure	0.05 MPa
Ambient and fluid temperature	Without auto switch: -20 to 80 °C (No freezing) With auto switch: -10 to 60 °C (No freezing)
Piston speed	50 to 1500 mm/s
Cushion	Rubber cushion
Port size	(ø32): G1/8; (ø40): G1/4

1) Please refer also to the detailed specification in chapter C76.

How to Order ¹⁾

1) For further cylinder variation please refer to chapter C76.

C76 Standard Stroke Variation with Rubber Cushion applicable for auto-switch ¹⁾

Standard stroke ²⁾ (mm)	Cylinder bore size (mm)	
	32	40
10	CD76E32-10-B	CD76E40-10-B

1) Quick Delivery Service, in just 24h (on request).

2) Intermediate strokes are also possible with on request quick delivery service (48 hr). For longer stroke please refer to chapter C76.

Auto Switches

Auto-switch for C76 (24VDC)¹⁾

How to order	Description ²⁾
D-M9PL	Solid state switch (PNP) with 3m cable, LED.
D-M9PSAPC	Solid state switch (PNP) with M8 (3-pin) connector, LED.
D-M9PSBPC	Solid state switch (PNP) with M8 (4-pin) connector, LED.
D-M9PSDPC	Solid state switch (PNP) with M12 connector, LED.
D-C73L	Reed switch with 3m cable, LED.

1) For further auto switch variation please refer to chapter C76.

2) Please refer also to the detailed Specification in chapter C76.

Auto-switch Mounting Bracket for C76

How to order	Applicable cylinder bore size

3 m L (Example) M9NL
5 m Z (Example) M9NZ

* ○ solid state auto switch is available after receiving an order.

⚠ Caution

- ① Be sure to read before handling. Refer to Best Pneumatics catalogue for Safety Instructions, Actuators and Auto Switches Precautions.
- ② This product should not be used as a stopper.
- ③ Use the PF thread fittings for this cylinder

- Order two foot brackets per cylinder.
- Parts belonging to each bracket are as follows.
Foot, Flange, Single clevis/Body mounting bolt

Specifications

Type	Pneumatic (Non-lube)
Action	Double acting, Single rod
Fluid	Air
Proof pressure	1.5 MPa
Maximum operating pressure	1.0 MPa
Minimum operating pressure	0.05 MPa
Ambient and fluid temperature	Without auto switch: -10 to 70°C (No freezing) With auto switch: -10 to 60°C (No freezing)
Cushion	Rubber bumper on both end
Stroke length tolerance	+1.0 mm 0
Mounting	Through-hole/Both ends tapped common
Piston speed	50 to 500 mm/s

Standard Stroke

Bore size (mm)	Standard stroke (mm)
20 to 63	5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 60, 80, 100, 125, 150

Manufacture of Intermediate Stroke

Description	Dealing with the stroke by the 1 mm interval by using an exclusive body with the specified stroke
Part no.	Refer to "How to Order" for the standard model no. (page at left)
Stroke range	6 to 149
Example	Part no.: C55B32-47
	Makes 47 stroke tube

Add each weight of auto switches and mounting brackets when mounting an auto switches.

Allowable Lateral Load

Make sure to operate strictly within the allowable lateral load range to the rod end.
Operation outside of this range may result in shorter service life or damage to the device.

Allowable Kinetic Energy

Make sure to operate strictly within the allowable range of the load weight and maximum speed.
Operation outside of this range may cause excessive impact, which may result in the damage to the device.

* Refer to Model Selection in Best Pneumatics catalogue for details about model selection procedure.

Construction

ø20, ø25

With auto switch (Built-in magnet)

ø32 to ø63

With auto switch (Built-in magnet)

M: Rod end male thread

Component Parts

No.	Description	Material	Note
1	Cylinder tube	Aluminum alloy	Hard anodized
2	Piston	Aluminum alloy	Chromated
3	Piston rod	Stainless steel	ø20, ø25
		Carbon steel	ø32 to ø63 Hard chrome plated
4	Collar	Aluminum alloy	ø20 to ø40 Anodized
		Aluminum alloy casted	ø50, ø63 Painted after chromated
5	Snap ring	Carbon tool steel	Phosphate coated
6	Bumper A	Urethane	
7	Bumper B	Urethane	
8	Bushing	Oil-impregnated sintered alloy	ø20, ø25
		Phosphor bronze alloy	ø32 to ø63
9	Wear ring	Resin	
10	Magnet	—	
11	Rod end nut	Carbon steel	Nickel plated
12	Rod seal	NBR	
13	Piston seal	NBR	
14	Tube gasket	NBR	

Replacement Parts: Seal Kit

Bore size (mm)	Kit no.	Contents
20	CQ2B20-PS	Set of nos. above ⑫, ⑬, ⑭
25	CQ2B25-PS	
32	CQ2B32-PS	
40	CQ2B40-PS	
50	CQ2B50-PS	
63	CQ2B63-PS	

* Seal kit includes ⑫, ⑬, ⑭. Order the seal kit, based on each bore size.

Mounting Bolt

Should use recommended bolt shown as below table when mounting the cylinder using through-hole.

Note) To install a through-hole type mounting bolt, bore size 20 to 63 mm, make sure to use the flat washer that is provided.

Mounting Bolt for C55

Operating Range

Auto switch model	Bore size (mm)					
	20	25	32	40	50	63
D-F9□W(V) D-F9BAL	5	5.5	6	6	6	6.5
D-A9□(V)	9	9	9	9	9	10.5
D-M9□(V)	3	3.5	3.5	3.5	3.5	4

* The operating ranges are provided as guidelines including hystereses and are not guaranteed values (assuming approximately $\pm 30\%$ variations). They may vary significantly with ambient environments.

Minimum Auto Switch Mounting Stroke

Bore size (mm)	Auto switch model Number of auto switches	D-A9□	A9□V	D-M9□	D-M9□V	D-F9□W	D-F9□WV	D-F9BAL
20	2 pcs.	10	10	15	5	15	10	20
	1 pc.	10	5	15	5	15	5	20
25,32,40,50	2 pcs.	10	10	10	5	10	10	20
	1 pc.	10	5	10	5	10	5	20
63	2 pcs.	10	10	10	5	10	10	15
	1 pc.	5	5	5	5	10	5	15

Besides the models listed in "How to Order," the following auto switches are applicable.
Refer to Best Pneumatics for detailed specifications.

Type	Part no.	Electrical entry	Features
Solid state switch	D-F9G	Grommet (In-line)	Normally closed (N.C. = b contact), 3-wire
	D-F9H		Normally closed (N.C. = b contact), 2-wire

Mounting of Auto Switch

To mount auto switches, follow the instruction illustrated below.

ø20 to ø63/Direct mounting

- Use a watchmakers' screwdriver with a handle 5 to 6 mm in diameter when tightening the auto switch mounting screw.
Tightening torque should be set 0.10 to 0.20 N·m.

ISO Cylinder Series C85

ø8, ø10, ø12, ø16, ø20, ø25

Conforms to ISO 6432 and CETOP RP52P

ISO Cylinder/Standard, Non-rotating Rod: Single Acting Spring Return/Extend

Series C85

ø8, ø10, ø12, ø16, ø20, ø25

How to Order

Single acting
Spring return/extend

C D 85 K N 16 50 S B

Magnet

—	None
D	Built-in magnet

Style

—	Standard
K	Non-rotating rod (only rubber bumper)

Mounting

Symbol	Mounting
N	Basic integrated clevis
E	Double end
F	Boss cut
Y*	Boss cut - End port

* Except for: air cushion,
single acting (T) style.

Auto switch
mounting

A	Rail style
B	Band style

Auto switches and
bands are shown on
p.3-35 Please order
auto switches and bands
separately.

Single acting function

S	Spring return
T	Spring extend

Bore size-Stroke

Bore size (mm)	Standard stroke (mm)*	Max. stroke (mm)
ø8	10, 25, 50	50
ø10		
ø12		
ø16	10, 25, 50, 100, 150	150
ø20		
ø25		

* Other strokes available on request.

Mounting Bracket Parts No.

Bore (mm)	8	10	12	16	20	25
Bracket						
Foot (1 pc.)	C85L10A		C85L6A		C85L25A

Trunnion	C85T10		C85T16		C85T25	
Clevis	C85C10		C85C16		C85C25	
Single knuckle joint	KJ4D		KJ6D		KJ8D	KJ10D
Double knuckle joint	GKM4-8		GKM6-10		GKM8-16	GKM10-20
Floating joint	JA10-4-070		JA15-6-100		JA20-8-125	JA30-10-125

Note) Please order mounting brackets separately.

Replacement Parts

For Standard Cylinders

Bore (mm)	Kit No.	Note
20	C85-20PS	Every set includes: 1 rod seal 1 packing retaining washer 1 retaining ring
25	C85-25PS	

For Non-rotating Cylinders ("K")

Bore (mm)	Kit No.	Note
20	C85K-20PS	Every set includes: 1 rod seal 1 packing retaining washer 1 retaining ring
25	C85K-25PS	

ISO Cylinder/Standard, Non-rotating Rod: Single Acting Spring Return/Extend **Series C85**

Specifications

Bore size (mm)		8	10	12	16	20	25

Series C85

High Temperature

XB6

C85 **Mounting** **Bore size** **Stroke** — **XB6**
 N, E, F, Y 8, 10, 12, 16, 20, 25mm

Standard cylinder seals are replaced with special ones and other modifications are made in order to enable the cylinder to operate at a high ambient temperature (–10 to +150°C).

Possible applications:

- Bore size 8 + 0 and 25mm
- Rubber bumper
- Without magnets (Auto switches cannot be used at high temperature.)
- Single rod - Double acting
- Double rod - Double acting (W)

Dimensions unchanged

Specifications

Style	Air cylinder
Applicable sizes	ø8, ø10, ø12, ø16, ø20, ø25mm
Action	Double acting
Ambient temperature range	–10 to 150°C
Cushion	Rubber bumper
Material	Seal: Fluorocarbon rubber Wear ring: Fluorocarbon resin
Grease	Fluoroplastics grease

Low Temperature

XB7

C85 **Mounting** **Bore size** **Stroke** — **XB7**
 N, E, F, Y 20, 25mm

Standard cylinder seals are replaced with special ones and other modifications are made in order to enable the cylinder to operate at a low ambient temperature (–40 to +70°C).

Possible applications:

- Bore size 20 and 25mm
- Rubber bumper
- Without magnets (Auto switches cannot be used at low temperature.)
- Single rod - Double acting
- Double rod - Double acting (W)

Dimensions unchanged

Specifications

Style	Air cylinder
Applicable sizes	ø20, ø25mm
Action	Double acting
Ambient temperature range	–40 to 70°C
Cushion	Rubber bumper
Material	Seal: Low nitrile rubber Wear ring: Fluorocarbon resin
Grease	Fluoroplastics grease

Low Speed

XB9

C85 **Mounting** **Bore size** **Stroke** **XB9**
N, E, F, Y 20, 25mm

The cylinder does not generate any stick-slip phenomenon even at the rated low speed of 10 to 50mm/sec. All strokes smoothly drive at a constant speed.

Possible applications:

- Bore size 20 and 25mm
- Rubber bumper style only
- With or without magnets
- Single rod - Double acting

Dimensions unchanged

Specifications

Style	Air cylinder
Applicable sizes	ø20, ø25mm
Action	Double acting
Piston speed	10 to 50mm/sec
Cushion	Rubber bumper

Heavy-duty Scraper

XC4

C85 **Mounting** **Bore size** **Stroke** **XC4**
N, E, F, Y 20, 25mm

A heavy-duty scraper is used as wiper ring. Ideal for severe applications where the cylinder is exposed to dust, earth and sand. Applicable to casting machines, construction machines, industrial vehicles, etc..

Possible applications:

- Bore size 20 and 25mm
- Rubber bumper style only
- With or without magnets
- Single rod - Double acting
- Double rod - Double acting (W)

Dimensions unchanged

Specifications

Style	Air cylinder
Applicable sizes	ø20, ø25mm
Max. operating pressure	1MPa
Min. operating pressure	0.08MPa
Cushion	Rubber bumper
Wiper ring	NBR (SCB)

Construction

ISO Cylinder/Direct Mount: Double Acting

Series C85R

ø8, ø10, ø12, ø16, ø20, ø25

How to Order

Procedures

C76 Series: Ø32, Ø40

EASY- ACCURATE MOUNTING

Simple space saving design with high dimensional accuracy makes these cylinders very easy to use.
Large spanner flats on the rod and head covers greatly simplify their installation and positioning.

HIGH SPEED ACTUATION

Low friction and the standard elastomer cushion rings allow piston speeds up to 1500mm/sec. Either rubber or air cushion are available.

REPLACEABLE ROD PACKING

Rod packing can be quickly replaced, greatly extending the cylinder life.
(C85 Ø20, 25).

STRONG, CORROSION-PROOF BARREL

The risk of breakage or deformation due to external impacts is reduced by the use of harder, heavy walled stainless steel tube.

MINIMIZED SIDE CLEARANCE

The close tolerance of the piston rod in the front end bush allows greater side loading.

Model Selection Procedures

Air cylinder/ Double acting, single and double rod

Series C76

ø32, ø40

How to order

Double acting Single rod	C	D	76	K	E	32	100	C	J	A	XB6
Double acting Double rod	C	D	76	W	E	32	100	C	J	J	B
Single acting Spring return Spring extended	C	D	76	K	E	32	100	S		B	

Magnet
 Nil — None
 D — Built-in magnet

Double rod

Type
 Nil — Standard.
 K — Non-rotating
 (Rubber cushion
 only).

Mounting

Mark	Mounting
*E	Double end type
**F	Front nose type
**Y	Front nose in line type

* Double acting/Double rod type:
 Only double end type. (E).
 **Except for air cushion type.

Auto switch mounting type
 A — Rail mounted type
 B — Band mounted type

Other variations suffix

XB6	High operating temperature: -10~150°C (Non-magnetic)
XB7	Low operating temperature: -55~70°C available for bores 20 to 25mm
XB9	Low speed
XC6B	Stainless steel piston rod, piston rod nut and mounting nut
XC6A	Stainless steel piston rod and piston rod nut

Gaiter

Nil	Without gaiter
J	Nylon tarpaulin one side
K	Neoprene cloth one side
*JJ	Nylon tarpaulin both sides
*KK	Neoprene cloth both sides

* In case of double acting/double rod.

Action

S — Spring return
 T — Spring extended

Cushion

Nil — Rubber cushion (Standard)
 C — Air cushion (only "E" execution)

	Standard	Non-rotating	
32	C76-32PS	C76K-32PS	Every set includes: n°1 rod packing n°1 packing retaining washer n°1 retaining ring
40	C76-40PS	C76K-40PS	

Suitable also C76 series

Example of How to Order

- In case of without auto switch, bore size: 32, stroke: 100, double acting/single rod and double end type.
C76E32-100 1 pc. — Cylinder
- In case of without auto switch, bore size: 32, stroke: 50, double acting/double rod, double end type and rod and head foot mounting.
C76WE32-50 1 pc. — Cylinder
C76L32B 2 pcs. — Foot bracket
- In case of with auto switch (band mounted type, 2 pcs.), bore size: 40, stroke: 100, double acting/single rod, front nose in line type and flange mounting.
CD76Y40-100-B 1 pc. — Cylinder
C76F40A 1 pc. — Flange mounting
D-C73L 2 pcs. — Auto switch
BM2-040 2 pcs. — For auto switch mounting band
- In case of with auto switch (rail mounted type, 2 pcs.), bore size: 40, stroke: 50, single acting/spring return, front nose type and trunnion mounting.
CD76F40-50S-A 1 pc. — Cylinder
C76T40 1 pc. — Trunnion mounting
D-A73L 2 pcs. — Auto switch
- Non-rotating : In case of without auto switch, bore size: 32, stroke: 100, double acting/single rod and double end type.
C76KE32-100 1 pc. — Cylinder

Series C76

Bore size: ø32, ø40

Specifications

Bore size (mm)	32	40
Piston rod dia. (mm)	12	14
Piston rod thread	M10	M12
Ports	G1/8	G1/4
Action	Single acting/single rod, spring return, spring extended	
Fluid	Air	
Proof pressure	1.5MPa {15bar}	
Max operating pressure	1.0MPa {10bar}	
Min operating pressure	Spring return: 0.18MPa (1.8bar) spring extended: 0.23MPa (2.3bar)	
Ambient and fluid temperature	-20~80°C (Built-in magnet type: -10~60°C)	
Lubrication	None (Non lubricated)	
Piston speed	50~750mm/s	
Allowable kinetic energy (J)	0.65	1.2
Non-rotating accuracy	±0.5°	±0.5°

Note) Theoretical force(N) = Pressure (MPa) X Piston area (mm²)

Allowable Kinetic Energy

Example: Load limit at rod end when air cylinder ø63 is actuated with max. actuating speed 500mm/s. See the intersection of lateral axis 500mm/s and ø63 line, and extend the intersection to left. Thus the allowable load is 80kg.

Weight table

[kg]

Ø Bore	Mounting type	32	40	50	63	80	100
Basic weight	Basic type B	0.59	0.87	1.44	2.00	3.37	4.45
	Foot L	0.16	0.20	0.38	0.46	0.89	1.09
	Front/rear flange F	0.20	0.23	0.47	0.58	1.30	1.81

Additional weight per 50 mm stroke		0.11	0.17	0.28	0.40	0.67	0.89
Accessories	Piston rod ball joint KJ	0.15	0.23	0.26	0.26	0.60	0.83
	Rod clevis GKM	0.22	0.37	0.43	0.43	0.87	1.27
	Floating joint JA	0.015	0.20	0.26	0.26	0.9	0.9

Weight calculation method

Example: CP95S32-100

(basic Ø32, 100st)

- Basic weight0.59kg (Standard Ø32)
- Additional weight . .0.11kg/50mm stroke
- Cylinder stroke . . .100st

Cylinder weight =

$$0.59 + (0.11 \times 100/50) = 0.81\text{kg}$$

Series CP95

Auto Switch Mounting Accessories for D-M9

Bore size (mm)	Order No.
ø32~ø100	BMP1-032
	BMG2-012

Note: For the mounting of auto switch D-M9, both BMP1-032 and BMG2-012 are necessary.

Series CP95K

ISO Symbol
Double acting

Minimum Strokes for Auto Switch Mounting

Refer to p.5-32 on "Minimum Strokes for Auto Switch Mounting".

Theoretical Force

OUT side is identical to double acting single rod.
Refer to table below for IN side.

Bore size (mm)	Rod diameter (mm ²)	Bore size (mm)	Rod diameter (mm ²)
32	675	63	2804
40	1082	80	4568
50	1651	100	7223

Theoretical force (N) =
Pressure (MPa) X Piston area (mm²)

Specifications

Bore size	ø32	ø40	ø50	ø63	ø80	ø100
Action	Double acting					
Fluid	Air					
Proof pressure	1.5MPa					
Max. operating pressure	1.0MPa					
Min. operating pressure	0.05MPa					
Ambient and fluid temperature	Without magnet -10 to 70°C (No freezing)					
	With magnet -10 to 60°C (No freezing)					
Lubrication	Not required (Non-lube)					
Operating piston speed	50 to 1000mm/s					
Allowable stroke tolerance	to 250: $^{+1.0}_0$, 251 to 1000: $^{+1.4}_0$					
Cushion	Both ends (Air cushion) ⁽¹⁾					
Port size	G1/8	G1/4	G1/4	G3/8	G3/8	G1/2
Mounting	Basic, axial direction foot, front flange, rear flange, single rear clevis, double rear clevis, spherical bearing					
Non-rotating accuracy	ø32, ø40	±0.5°				
	ø50, ø63	±0.5°				
	ø80, ø100	±0.3°				
Allowable rotating torque (Nm) max.	ø32	0.25	ø80		0.79	
	ø40	0.45	ø100		0.93	
	ø50, ø63	0.64	—		—	

Note 1) Absorbable kinetic energy by cushion mechanism is identical to double acting single rod.

Standard Stroke

Bore size (mm)	Standard stroke (mm)	Max. * stroke
32	25, 50, 80, 100, 125, 160, 200, 250, 320, 400, 500	700
40	25, 50, 80, 100, 125, 160, 200, 250, 320, 400, 500	800
50	25, 50, 80, 100, 125, 160, 200, 250, 320, 400, 500, 600	1000
63	25, 50, 80, 100, 125, 160, 200, 250, 320, 400, 500, 600	1000
80	25, 50, 80, 100, 125, 160, 200, 250, 320, 400, 500, 600	1000
100	25, 50, 80, 100, 125, 160, 200, 250, 320, 400, 500, 600	1000

Intermediate strokes are available.

*Please consult SMC for longer stroke.

Weight

Bore size (mm)		32	40	50	63	80	100
Basic weight	Basic	0.56	0.84	1.39	1.91	3.22	4.24
	Axial foot	0.16	0.20	0.38	0.46	0.89	1.09
	Flange	0.20	0.23	0.47	0.58	1.30	1.81
	Single clevis	0.16	0.23	0.37	0.60	1.07	1.73
	Double clevis	0.20	0.32	0.45	0.71	1.28	2.11
Additional weight per 50 stroke		0.11	0.16	0.26	0.27	0.42	0.56
Accessories	Single rod clevis	0.15	0.23	0.26	0.26	0.60	0.83
	Double rod clevis (with pin)	0.22	0.37	0.43	0.43	0.87	1.27

Calculation example: CP95KD40-100

- Basic weight 0.84 (Basic)
- Additional weight ... 0.16/50 stroke
- Cylinder stroke 100 stroke
- 0.84+0.16 X 100/50+0.32=1.48kg
- Mounting 0.32 (Double clevis)

Part No: Mounting Bracket, Mounting Accessories

Auto Switch Mounting Accessories for D-M9

Bore size (mm)	Order No.
ø32~ø100	BMP1-032
	BMG2-012

Note: For the mounting of auto switch D-M9, both BMP1-032 and BMG2-012 are necessary.

Specifications

Bore size (mm)	32	40	50	63	80	100
Action	Double acting single rod					
Direction of low friction	One direction					
Fluid	Air					
Proof pressure	1.05MPa					
Max. operating pressure	0.7MPa					
Min. operating pressure	0.01MPa					
Ambient and fluid temperature	Without auto switch: -10 to 70°C (No freezing)					
	With auto switch: -10 to 60°C (No freezing)					
Lubrication	Not required (Non-lube)					
Cushion	None					
Port size	G 1/8	G 1/4	G 1/4	G 3/8	G 3/8	G 1/2
Mounting	Basic, Foot, Front flange, Rear flange, Single clevis, Double clevis, spherical bearing

Note 1) Two foot brackets required for one cylinder.

Note 2) Accessories for each mounting bracket are as follows.

Foot, Flange, Single clevis: Mounting bolts

Double rear clevis: (D,DS): Clevis pin

Note 3) GKM according to ISO 8140

Note 4) KJ according to ISO 8139

Note 5) Piston rod nut is standard

Selection Guide for the Low Friction Side

- ① When used as a balancer etc., follow the example of the application mentioned earlier applying pressure at one port while leaving the other port open to atmosphere.
 - With pressure at rod cover port
..... Low friction side CB (Example of application ①)
 - With pressure at head cover port
..... Low friction side CA (Example of application ②)
- In both cases, as long as the outside pressure moves the piston rod, low friction can result in the direction of extension and retraction.
- ② When used applying pressure to both ports the same time, follow the above mentioned guide and as in the following.
 - With relatively higher pressure on rod cover port
..... Use Low friction side CB
 - With relatively higher pressure on head cover port
..... Use Low friction side CA

Application Example

Low friction cylinder used in combination with precision regulator (Series IR)

For Dimensions, Weight, Accessories see CP95S

Auto Switch Mounting Accessories for D-M9

Bore size (mm)	Order No.
ø32~ø100	BMP1-032
	BMG2-012

Note: For the mounting of auto switch D-M9, both BMP1-032 and BMG2-012 are necessary.

Series CP95P

Specifications

Application:

The positioner IP200 is capable of pneumatic positioning of the piston. Adjustable positions can be reached with high repeating accuracy. The piston stroke is in proportion to the air pressure input signal (0.02-0.01MPa). External forces on the position of the piston are reduced to a minimum by a special control system and an integrated function to revert the set position.

The IP200 shows excellent performance in remote control or standard control of flaps, proportioning devices, pumps, gears usw.

Specifications

- The bleed pressure acts directly onto the flapper plate. A change of the input signal will cause an instantaneous movement of the piston rod.
- easy and simple adjustment of neutral point and operation band from outside.
- Return spring is protected against accidental touches
- Positioner cylinder conforms to ISO and CETOP recommendations
- No change in dimensions with auto switch capability

Specifications

Fluid	Air 5µm filtration

Single Rod Weight Table

Bore Size [mm]		[kg]					
		32	40	50	63	80	100
Basic weight	Basic type B	1.40	2.15	3.53	5.18	8.99	12.72
Additional weight per 50mm of stroke	All mounting brackets	0.11	0.16	0.26	0.27	0.42	0.56

(Example) CP95NDB32-100 (Standard, Ø32, 100er)

•Basic weight..... 1.40 (basic type, Ø32)

•Additional weight 0.11/50mm stroke

•Cylinder stroke 100mm stroke

1.40 + 0.11 x 100/50 = 3.02kg

Manual override for unlocking

In case the air supply is cut off or discharged, unlocking can be performed with a commercially available tool. The fail safe mechanism locks again when manual override is released.

Weight accessories [kg]

Ø	32	40	50	63	80	100
L	0.16	0.20	0.38	0.46	0.89	1.09
F	0.20	0.23	0.47	0.58	1.30	1.81
C	0.16	0.23	0.37	0.60	1.07	1.73
D	0.20	0.32	0.45	0.71	1.28	2.11

Example:

Cylinder Ø40 mm, Stroke 100 mm, bracket D

Weight = 0.84 kg + (0.16 kg x $\frac{100}{50}$) + 0.32 kg = 1.48 kg

Construction Principles

Spring lock (exhaust lock)

The spring force which acts upon the taper ring is magnified by a wedge effect, and is conveyed to all of the numerous steel balls which are arranged in two circles. These act on the brake shoe holder and brake, which locks the piston rod by tightening against it with a large force.

Unlocking is accomplished when air pressure is supplied to the unlocking port. The brake piston and taper ring oppose the spring force, moving to the right side, and the braking force is released as the steel balls are removed from the taper ring by the ball retainer.

Series CP95N Specific Product Precaution

Air Pressure Circuits

Warning

1. Basic Circuits

1. [Horizontal]

Forward

Backward

Sol.A	Sol.B	Sol.C	Action	
ON	ON	OFF	Forward	0.5s or more
OFF	OFF	OFF	Locked stop	0 to 0.5s
ON	OFF	OFF	Unlocked	
ON	ON	OFF	Forward	
ON	OFF	ON	Backward	0.5s or more
OFF	OFF	OFF	Locked stop	0 to 0.5s
ON	OFF	OFF	Unlocked	
ON	OFF	ON	Backward	

2. [Vertical]

[Load in direction of rod extension]

[Load in direction of rod retraction]

Caution

1. A 3 position pressure centre solenoid valve and regulator with check valve can be replaced with two 3 port normally open valves and a regulator with relief function.

[Example]

1. [Horizontal]

Air Pressure Circuits

Caution

2. [Vertical]

[load in direction of rod extension]

[Load in direction of rod retraction]

Manual Unlocking

Caution

1. The unlocking cam provided on the C95N Series is an emergency unlocking mechanism only.
During an emergency when the air supply is cut off, it is used to alleviate a problem by forcibly pushing the release piston back to release the lock. However, take note that the sliding resistance of the piston rod will be high compared to unlocking with air pressure.
2. When installing into equipment or machinery, etc., in cases where it will be necessary to hold an unlocked condition for an extended time, air pressure of 0.25MPa or more should be applied to the unlocking port.
3. Do not turn the unlocking cam (the arrow ← on the unlocking cam head) past the FREE position. If it is turned too far there is a danger of damaging the unlocking cam.

Locked condition

Manually unlocked position

[Principle]

If the unlocking cam is turned counter clockwise with a tool such as an adjustable angle wrench, the release piston is pushed back and the lock is released. Since the lever will return to its original position when released and become locked again, it should be held in this position for as long as unlocking is needed.

Precautions on Model Selection

⚠ Caution

Example

Selection Example

- **Load weight:** $m=50\text{kg}$
- **Movement distance:** Stroke=500mm
- **Movement time:** $t=2\text{s}$
- **Load condition:** Vertical downward=Load in direction of rod extension
- **Operating pressure:** $P=0.4\text{MPa}$

Step 1: From graph 1 find the maximum movement speed of the load
 $\therefore$ Maximum speed V : approx 350mm/s

Step 2: Select graph 6 based upon the load condition and operating pressure, and then from the intersection of the maximum speed $V=350\text{mm/s}$ found in step 1, and the load weight $m=50\text{kg}$
 $\therefore$ $\varnothing 63 \rightarrow$ select a C95NDB63 or larger bore size.

Step 1 Find the maximum load speed: V

Graph 1

Step 2 Find the cylinder bore size

Auto switch mounting

[mm]

Minimum strokes for auto switches

Auto switch type	Model	Amount* of switches	Ø32	Ø40	Ø50	Ø63	Ø80	Ø100
Reed	D-Z73L	2 pcs.	25				15	
	D-Z80L	1 pcs.						
Solid state	D-Y59BL	2 pcs.	25				15	
	D-Y69BL	1 pcs.						
	D-Y7PL							

*Auto switches are mounted on the same side but in different grooves of the cylinder.

Recommended mounting position for stroke ends

[mm]

Bore (mm)	D-Z73L, D-Z80L, D-Y7PL D-Y59BL, D-Y69BL	
	A	B
32	14	1
40	25	1
50	16	2
63	31	2
80	21.5	5.5
100	31.5	5.5

Mounting of Auto Switches

1N·m: approx. 10.2kgf·cm

When attaching an auto switch, first take a switch holder between your fingers and press it into a switch mounting groove. When doing this, confirm that it is set in the correct mounting orientation, or reattach if necessary. Next, insert an auto switch into the groove and slide it until it is positioned under the switch holder.

After establishing the mounting position, use a watchmakers flat head screw driver to tighten the switch mounting screw which is included.

Switch holder: BMP1-032

Note) When tightening the auto switch mounting screw, use a watchmakers screw driver with a handle about 5 to 6mm in diameter. Tighten to a torque of approximately 0.05 to 0.1Nm (0.51 to 1.02kgf·cm). As a rule, it is turned about 90° past the point at which tightening can be felt.

How to order: Auto Switches, holders and Groove Covers

Auto switch holder band

Ø	Order No.	
	Auto switch	Switch holder
32	D-Z73L	BMP1-032
40	D-Z80L	
50	D-Y7PL	
63	D-Y59BL	
80	D-Y69BL	
100		

Groove cover of square tube

Ø	Order No.	Cylinder length without stroke
32	CP95-AL	41.5 mm
40		52.5 mm
50		44.5 mm
63		59.5 mm
80		53.5 mm
100		63.5 mm

☐ Write the required length of the groove cover in the box.

Groove covers are available in progressive rates of 1 metre. Please, indicate round figures when ordering.

Order example: Groove cover for CP95SB63-160

59.5 mm + 160 mm = 239.5 x 8 grooves = 1916 mm

[Cylinder length without stroke] [Stroke] [8 grooves in the square tube]

Length to order: 1916 mm corresponds to a groove cover of 2 m for each cylinder

Order No.: CP95-AL 2 length in metres

Series CP95

Specific Product Precautions

Adjustment

⚠ Warning

- ① **Do not open the cushion valve above the stopper.**
Cushion valves are provided with a crimp (ø32) or a retaining ring (ø40 to ø100) as a stopping mechanism, and the cushion valve should not be opened above that point.
If air is supplied and operation started without confirming the above condition, the cushion valve may be ejected from the cover.

Bore size (mm)	Cushion valve	Width across flats	Socket wrench
32, 40, 50	MB-32-10-C1247	2.5	JIS 4648 Hex spanner wrench 2.5
63, 80, 100	MB-63-10-C1250	4	JIS 4648 Hex spanner wrench 4

- ② **When replacing brackets, use the hexagon wrenches shown below.**

Bore size (mm)		Bolt	Width across flats	Tightening torque (Nm)
32, 40		MB-32-48-C1247	4	4.9
50, 63		MB-50-48-C1249	5	11
80, 100	Foot	MB-80-48AC1251	6	25
	Others	MB-80-48BC1251		

With Non-rotating Rod (Double Acting: Single Rod)

Operating Precautions

⚠ Caution

- ① **Do not apply more than the allowable rotating torque to the piston rod.**
If more than the allowable rotating torque is applied, the non-rotating guide will be deformed and there will be a significant loss of rotational accuracy. This may cause damage to the machinery.

Mounting & Piping

⚠ Caution

- ① **Mounting of a work piece at the rod end.**
When screwing a fitting or nut, etc. onto the threads at the end of the piston rod, push the piston rod into its fully retracted position, and grasp the protruding section with a wrench.
Furthermore, when tightening, take care that the torque is not applied to the non-rotating guide.

Double acting

Minimum Strokes for Auto Switch Mounting

Refer to p.6-32 for "Minimum Strokes for Auto Switch Mounting".

Specifications

Bore size	ø32	ø40	ø50	ø63	ø80	ø100
Action	Double acting					
Fluid	Air					
Proof pressure	1.5MPa					
Max. operating pressure	1.0MPa					
Min. operating pressure	0.05MPa					
Ambient and fluid temperature	Without magnet -10 to 70°C (No freezing)					
	With magnet -10 to 60°C (No freezing)					
Lubrication	Not required (Non-lube)					
Operating piston speed	50 to 1000mm/s					
Allowable stroke tolerance	to 250: $^{+1.0}_0$, 251 to 1000: $^{+1.4}_0$, 1001 to 1500: $^{+1.8}_0$					
Cushion	Both ends (Air cushion)					
Thread tolerance	JIS class 2					
Port size	G1/8	G1/4	G1/4	G3/8	G3/8	G1/2
Mounting	Basic, axial foot, front flange, rear flange, Floating joint, single rear clevis, double rear clevis, center trunnion					

Standard Stroke

Bore size (mm)	Standard stroke (mm)	Max. * stroke
32	25, 50, 80, 100, 125, 160, 200, 250, 320, 400, 500	700
40	25, 50, 80, 100, 125, 160, 200, 250, 320, 400, 500	800
50	25, 50, 80, 100, 125, 160, 200, 250, 320, 400, 500, 600	1200
63	25, 50, 80, 100, 125, 160, 200, 250, 320, 400, 500, 600	1200
80	25, 50, 80, 100, 125, 160, 200, 250, 320, 400, 500, 600	1400
100	25, 50, 80, 100, 125, 160, 200, 250, 320, 400, 500, 600	1500

Intermediate strokes are available.
Please consult with SMC for longer strokes.

- Note 1) Two foot brackets required for one cylinder.
 Note 2) Accessories for each mounting bracket are as follows.
 Foot, Flange, Single clevis: Mounting bolts
 Double rear clevis: (D,DS): Clevis pin
 Note 3) C95-S: Set of 2 pcs.
 Note 4) GKM according to ISO 8140
 Note 5) KJ according to ISO 8139
 Note 6) Piston rod nut is standard

Theoretical Force

(Unit : N) 

Bore size (mm)	Rod diameter (mm)	Operating direction	Piston area (mm ²)	Operating pressure (MPa)

		IN	7147	1429	2144	2859	3574	4288	5003	5718	6432	7147

Note) Theoretical force(N) = Pressure (MPa) X Piston area (mm²)

Weight Table

Bore size (mm)		32	40	50	63	80	100
Basic weight	Basic	0.56	0.84	1.39	1.91	3.22	4.24
	Foot	0.16	0.20	0.38	0.46	0.89	1.09
	Flange	0.20	0.23	0.47	0.58	1.30	1.81
	Single clevis	0.16	0.23	0.37	0.60	1.07	1.73
	Double clevis	0.20	0.32	0.45	0.71	1.28	2.11
	Trunnion	0.15	0.26	0.34	0.56	1.03	1.71
Additional weight per 50 stroke		All mounting brackets	0.11	0.16	0.26	0.27	0.42
Accessories	Single rod clevis	0.15	0.23	0.26	0.26	0.60	0.83
	Double rod clevis (with pin)	0.22	0.37	0.43	0.43	0.87	1.27

Calculation example: C95SD40-100

- Basic weight 0.84 (Basic, ø40)
 - Additional weight ... 0.16/50 stroke
 - Cylinder stroke 100 stroke
 - Mounting 0.32 (Double clevis)
- 0.84+0.16 X 100/50+0.32=1.48kg

Allowable Kinetic Energy

Example: Load limit at rod end when air cylinder ø63 is actuated with max. actuating speed 500mm/s. See the intersection of lateral axis 500mm/s and ø63 line, and extend the intersection to left. Thus the allowable load is 80kg.

Series C95

Construction

Component Parts

No.	Description	Material	Note
①	Rod cover	Aluminum die cast	
②	Head cover	Aluminum die cast	
③	Cylinder tube	Aluminum die cast

ISO Cylinder/Standard: Double Acting

Series C95K

ø32, ø40, ø50, ø63, ø80, ø100

How to Order

Standard C95KD B 32 100 W A53 S

Built-in magnet

Mounting

Mounting	Description
B	Basic/without bracket
L	Axial foot
F	Front flange
G	Rear flange
C	Single rear clevis
D	Double rear clevis
T	Centre trunnion

Bore size

Bore size	Description
32	32mm
40	40mm
50	50mm
63	63mm
80	80mm
100	100mm

Auto switch

Auto switch	Description
—	Without auto switch

* Refer to table below for selection of applicable auto switch.

Number of auto switches

Number of auto switches	Description
—	2
S	1

Series C95K

Specifications

Bore size	ø32	ø40	ø50	ø63	ø80	ø100
Action	Double acting					
Fluid	Air					
Proof pressure	1.5MPa					
Max. operating pressure	1.0MPa					
Min. operating pressure	0.05MPa					
Ambient and fluid temperature	Without magnet -10 to 70°C (No freezing)					
	With magnet -10 to 60°C (No freezing)					
Lubrication	Not required (Non-lube)					
Operating piston speed	50 to 1000mm/s					
Allowable stroke tolerance	to 250: $^{+1.0}_0$, 251 to 1000: $^{+1.4}_0$					
Cushion	Both ends (Air cushion) ⁽¹⁾					
Thread tolerance	JIS class 2					
Port size	G1/8	G1/4	G1/4	G3/8	G3/8	G1/2
Mounting	Basic, axial direction foot, front flange, rear flange, single rear clevis, double rear clevis, centre trunnion, spherical bearing					
Non-rotating accuracy	ø32, ø40	±0.5°				
	ø50, ø63	±0.5°				
	ø80, ø100	±0.3°				
Allowable rotating torque (Nm) max.	ø32	0.25		ø80	0.79	
	ø40	0.45		ø100	0.93	
	ø50, ø63	0.64		—	—	

Note 1) Absorbable kinetic energy by cushion mechanism is identical to double acting single rod.

Minimum Strokes for Auto Switch Mounting

Refer to p.6-32 on "Minimum Strokes for Auto Switch Mounting".

Theoretical Force

OUT side is identical to double acting single rod. Refer to table below for IN side.

Bore size (mm)	Rod diameter (mm ²)	Bore size (mm)	Rod diameter (mm ²)
32	675	63	2804
40	1082	80	4568
50	1651	100	7223

Theoretical force (N) =
Pressure (MPa) X Piston area (mm²)

Standard Stroke

Bore size (mm)	Standard stroke (mm)	Max. * stroke
32	25, 50, 80, 100, 125, 160, 200, 250, 320, 400, 500	700
40	25, 50, 80, 100, 125, 160, 200, 250, 320, 400, 500	800
50	25, 50, 80, 100, 125, 160, 200, 250, 320, 400, 500, 600	1000
63	25, 50, 80, 100, 125, 160, 200, 250, 320, 400, 500, 600	1000
80	25, 50, 80, 100, 125, 160, 200, 250, 320, 400, 500, 600	1000
100	25, 50, 80, 100, 125, 160, 200, 250, 320, 400, 500, 600	1000

Intermediate strokes are available.

* Please consult with SMC for longer strokes.

Weight

Bore size (mm)		32	40	50	63	80	100
Basic weight	Basic	0.56	0.84	1.39	1.91	3.22	4.24
	Axial foot	0.16	0.20	0.38	0.46	0.89	1.09
	Flange	0.20	0.23	0.47	0.58	1.30	1.81
	Single clevis	0.16	0.23	0.37	0.60	1.07	1.73
	Double clevis	0.20	0.32	0.45	0.71	1.28	2.11
	Center trunnion	0.15	0.26	0.34	0.57	1.03	1.71
Additional weight per 50 stroke		All mounting brackets	0.11	0.16	0.26	0.27	0.42
Accessories	Single rod clevis	0.15	0.23	0.26	0.26	0.60	0.83
	Double rod clevis (with pin)	0.22	0.37	0.43	0.43	0.87	1.27

Calculation example: C95KD40-100

- Basic weight 0.84 (Basic)
- Additional weight ... 0.16/50 stroke
- Cylinder stroke 100 stroke
- 0.84+0.16 X 100/50+0.32=1.48kg
- Mounting 0.32 (Double clevis)

Part No: Mounting Bracket, Mounting Accessories

Note 1) Two foot brackets required for one cylinder.

Note 2) Accessories for each mounting bracket are as follows.

Foot, Flange, Single clevis: Mounting bolts

Double rear clevis: (D,DS): Clevis pin

Note 3) C95-S: Set of 2 pcs.

Note 4) GKM according to ISO 8140

Note 5) KJ according to ISO 8139

Note 6) Piston rod nut is standard

Construction

Component Parts

No.	Description	Material	Note

ISO Cylinder/Standard: Double Acting, Low Friction

Series C95Q

ø32, ø40, ø50, ø63, ø80, ø100

How to Order

Standard C95QD B 32 100 R CA A53 S

Built-in magnet → C95QD

Mounting → B

B	Basic/without bracket
L	Axial foot
F	Front flange
G	Rear flange
C	Single rear clevis
D	Double rear clevis
T	Centre trunnion

Bore size → 32

32	32mm
40	40mm
50	50mm
63	63mm
80	80mm
100	100mm

Stroke (mm) → 100

Refer to standard stroke table on p.6-16

Direction of low friction → CA

CA	With pressure at head side
CB	With pressure at rod side

Auto switch → A53

— Without auto switch

* Refer to table below for selection of applicable auto switch.

Number of auto switches

—	2
S	1
3	3
n	n

Rod specifications

—	Hard chrome as standard
R	Stainless steel piston rod
K	Stainless steel and acid-proof piston rod

Note 1) Two foot brackets required for one cylinder.

Note 2) Accessories for each mounting bracket are as follows.

Foot, Flange, Single clevis: Mounting bolts

Double rear clevis: (D,DS): Clevis pin

Note 3) C95-S: Set of 2 pcs.

Note 4) GKM according to ISO 8140

Note 5) KJ according to ISO 8139

Note 6) Piston rod nut is standard

Selection Guide for the Low Friction Side

- ① When used as a balancer etc., follow the example of the application mentioned earlier applying pressure at one port while leaving the other port open to atmosphere.
 - With pressure at rod cover port
 - Low friction side CB (Example of application ①)
 - With pressure at head cover port
 - Low friction side CA (Example of application ②)

In both cases, as long as the outside pressure moves the piston rod, low friction can result in the direction of extension and retraction.
- ② When used applying pressure to both ports the same time, follow the above mentioned guide and as in the following.
 - With relatively higher pressure on rod cover port
 - Use Low friction side CB
 - With relatively higher pressure on head cover port
 - Use Low friction side CA

For Dimensions, Weight, Accessories see C95S

Application Example

Low friction cylinder used in combination with precision regulator (Series IR)

Series C95Q

Construction

Component Parts

No.	Description	Material	Note
①	Rod cover	Aluminum die-cast	Metallic painted
②	Head cover	Aluminum die-cast	Metallic painted
③	Cylinder tube	Aluminum alloy	Hard anodized
④	Piston rod	Carbon steel	Hard chrome plated
⑤	Piston	Aluminum alloy	Chromated
⑥	Bushing	Lead bronze cast	
⑦	Cushion valve	Steel wire	Nickel plated
⑧	Snap ring	Steel for spring	ø40 to ø100
⑨	Tie rod	Carbon steel	Uni-chromated
⑩	Tie rod nut	Carbon steel	Nickel plated
⑪	Wear rod	Resin	
⑫	Rod end nut	Carbon steel	Nickel plated
⑬ *	Back up O ring	NBR	
⑭ *	Rod seal	NBR	
⑮ *	Piston seal	NBR	
⑯	Cushion valve seal	NBR	
⑰ *	Cylinder tube gasket	NBR	
⑱	Piston gasket	NBR	

Replacement Parts: Seal Kits

Series C95P

Specifications

Application:

The positioner IP200 is capable of pneumatic positioning of the piston. Adjustable positions can be reached with high repeating accuracy. The piston stroke is in proportion to the air pressure input signal (0.02-0.01MPa). External forces on the position of the piston are reduced to a minimum by a special control system and an integrated function to revert the set position.

The IP200 shows excellent performance in remote control or standard control of flaps, proportioning devices, pumps, gears usw.

Specifications

- The bleed pressure acts directly onto the flapper plate. A change of the input signal will cause an instantaneous movement of the piston rod.
- easy and simple adjustment of neutral point and operation band from outside.
- Return spring is protected against accidental touches
- Positioner cylinder conforms to ISO and CETOP recommendations
- No change in dimensions with auto switch capability

Specifications

Fluid	Air 5µm filtration
Supply pressure "SUP" (MPa)	0.3 ~ 0.7
Signal pressure "SIG" (MPa)	0.02 ~ 0.1

Single Rod Weight Table

								[kg]
Bore Size [mm]		32	40	50	63	80	100	
Basic weight	Basic type B	1.40	2.15	3.53	5.18	8.99	12.72	
	Trunnion T	0.15	0.26	0.34	0.57	1.03	1.71	
Additional weight per 50mm of stroke		All mounting brackets	0.11	0.16	0.26	0.27	0.42	0.56

Manual override for unlocking

In case the air supply is cut off or discharged, unlocking can be performed with a commercially available tool. The fail safe mechanism locks again when manual override is released.

(Example) C95NDB32-100 (Standard, Ø32, 100er)

- Basic weight..... 1.40 (basic type, Ø32)
- Additional weight 0.11/50mm stroke
- Cylinder stroke 100mm stroke

$$1.40 + 0.11 \times 100/50 = 3.02\text{kg}$$

Weight accessories [kg]

Ø	32	40	50	63	80	100
L	0.16	0.20	0.38	0.46	0.89	1.09
F	0.20	0.23	0.47	0.58	1.30	1.81
C	0.16	0.23	0.37	0.60	1.07	1.73
D	0.20	0.32	0.45	0.71	1.28	2.11

Example:

Cylinder Ø40 mm, Stroke 100 mm, bracket D

$$\text{Weight} = 0.84 \text{ kg} + (0.16 \text{ kg} \times \frac{100}{50}) + 0.32 \text{ kg} = 1.48 \text{ kg}$$

Construction Principles

Spring lock (exhaust lock)

The spring force which acts upon the taper ring is magnified by a wedge effect, and is conveyed to all of the numerous steel balls which are arranged in two circles. These act on the brake shoe holder and brake, which locks the piston rod by tightening against it with a large force. Unlocking is accomplished when air pressure is supplied to the unlocking port. The brake piston and taper ring oppose the spring force, moving to the right side, and the ball retainer strikes the cover section A. The braking force is released as the steel balls are removed from the taper ring by the ball retainer.

Construction

Parts list

No.	Description	Material	Note
①	Rod cover	Aluminium alloy	Hard anodised & metallic coated
②	Head cover	Aluminium alloy	Chromated & metallic coated
③	Cover	Aluminium alloy	Hard anodised & metallic coated
④	Cylinder tubing	Aluminium alloy	Hard anodised
⑤	Piston rod	Carbon steel	Hard chrome plated
⑥	Piston	Aluminium alloy	Chromated
⑦	Taper Ring	Carbon steel	Heat treated
⑧	Ball retainer	Special resin	
⑨	Piston guide	Carbon steel	Zinc chromated

Series C95N

Specific Product Precaution

Air Pressure Circuits

Warning

1. Basic Circuits

1. [Horizontal]

2. [Vertical]

[Load in direction of rod extension]

[Load in direction of rod retraction]

Caution

1. A 3 position pressure centre solenoid valve and regulator with check valve can be replaced with two 3 port normally open valves and a regulator with relief function.

[Example]

1. [Horizontal]

Air Pressure Circuits

Caution

2. [Vertical]

[load in direction of rod extension]

[Load in direction of rod retraction]

Manual Unlocking

Caution

1. The unlocking cam provided on the C95N Series is an emergency unlocking mechanism only.
During an emergency when the air supply is cut off, it is used to alleviate a problem by forcibly pushing the release piston back to release the lock. However, take note that the sliding resistance of the piston rod will be high compared to unlocking with air pressure.
2. When installing into equipment or machinery, etc., in cases where it will be necessary to hold an unlocked condition for an extended time, air pressure of 0.25MPa or more should be applied to the unlocking port.
3. Do not turn the unlocking cam (the arrow ← on the unlocking cam head) past the FREE position. If it is turned too far there is a danger of damaging the unlocking cam.

Locked condition

Manually unlocked position

[Principle]

If the unlocking cam is turned counter clockwise with a tool such as an adjustable angle wrench, the release piston is pushed back and the lock is released. Since the lever will return to its original position when released and become locked again, it should be held in this position for as long as unlocking is needed.

Precautions on Model Selection

⚠ Caution

Example

Selection Example

- **Load weight:** $m=50\text{kg}$
- **Movement distance:** Stroke=500mm
- **Movement time:** $t=2\text{s}$
- **Load condition:** Vertical downward=Load in direction of rod extension
- **Operating pressure:** $P=0.4\text{MPa}$

Step 1: From graph 1 find the maximum movement speed of the load
 $\therefore$ Maximum speed V : approx 350mm/s

Step 2: Select graph 6 based upon the load condition and operating pressure, and then from the intersection of the maximum speed $V=350\text{mm/s}$ found in step 1, and the load weight $m=50\text{kg}$
 $\therefore$ $\varnothing 63 \rightarrow$ select a C95NDB63 or larger bore size.

Step 1 Find the maximum load speed: V

Graph 1

Step 2 Find the cylinder bore size

Direct mount auto switches can be installed on tie-rod type cylinders

Reed: D-Z7
D-Z8

Solid state: D-Y5
D-Y6
D-Y7

Direct mount type auto switches can now be attached to the tie-rods by using a special switch mounting bracket.

Smaller size

Protrusion of auto switches has been reduced

Easier handling

Auto switch mounting and positioning can be performed from one direction

Mounting and Movement of Auto Switches

Caution!

When tightening the auto switch mounting screw, use a watchmakers screw driver with a handle diameter of about 5 to 6mm.

Furthermore, use a tightening torque of 0.05 to 0.1 Nm. As a rule, it should be turned about 90° from the point at which tightening can be felt. Use a tightening torque of 1 to 1.2 Nm for the hexagon socket head set screws (M4 x 0.7).

1. Place the mounting bracket on the cylinder tie-rod, and secure it in the detection position with the set screw so that the bottom of the mounting bracket makes firm contact with the cylinder tube. (Use a hexagon wrench)
2. Insert an auto switch into the switch mounting groove of the mounting bracket, and place it in the approximate auto switch mounting position.
3. After confirming the detection position, secure the auto switch by tightening the mounting screw which is included with it.
4. Return to step 2 to change the detection position.

Note) In order to protect the auto switch, install it so that its body is housed at least 15mm inside the switch mounting groove.

Series C95

Specific Product Precautions

Adjustment

⚠ Warning

- ① **Do not open the cushion valve above the stopper.**
Cushion valves are provided with a crimp (ø32) or a retaining ring (ø40 to ø100) as a stopping mechanism, and the cushion valve should not be opened above that point.
If air is supplied and operation started without confirming the above condition, the cushion valve may be ejected from the cover.

Bore size (mm)	Cushion valve	Width across flats	Socket wrench
32, 40, 50	MB-32-10-C1247	2.5	JIS 4648 Hex spanner wrench 2.5
63, 80, 100	MB-63-10-C1250	4	JIS 4648 Hex spanner wrench 4

- ② **When replacing brackets, use the hexagon wrenches shown below.**

Bore size (mm)		Bolt	Width across flats	Tightening torque (Nm)
32, 40		MB-32-48-C1247	4	4.9
50, 63		MB-50-48-C1249	5	11
80,	Foot	MB-80-48AC1251	6	25
100	Others	MB-80-48BC1251		

With Non-rotating Rod (Double Acting: Single Rod)

Operating Precautions

⚠ Caution

- ① **Do not apply more than the allowable rotating torque to the piston rod.**
If more than the allowable rotating torque is applied, the non-rotating guide will be deformed and there will be a significant loss of rotational accuracy. This may cause damage to the machinery.

Mounting & Piping

⚠ Caution

- ① **Mounting of a work piece at the rod end.**
When screwing a fitting or nut, etc. onto the threads at the end of the piston rod, push the piston rod into its fully retracted position, and grasp the protruding section with a wrench.
Furthermore, when tightening, take care that the torque is not applied to the non-rotating guide.

Specifications

Bore size (mm)	125	160	200	250
Action	Double acting			
Fluid	Air			
Proof pressure	1.5 MPa			
Max. operating pressure	1.0 MPa			
Min. operating pressure	0.05 MPa			
Ambient and fluid temperature	Without auto switch: -10 to 70°C (No freezing) With auto switch: -10 to 60°C (No freezing)			
Lubrication	Not required (Non-lube)			
Operating piston speed	50 to 700 mm/sec	50 to 500 mm/sec		
Allowable stroke tolerance	Up to 250: ^{+1.0} ₀ , 251 to 1000: ^{+1.4} ₀ , 1001 to 1500: ^{+1.8} ₀			
Cushion	Both ends (Air cushion)			
Thread tolerance	JIS Class 2			
Port size	G 1/2	G 3/4		G 1
Mounting	Basic style, Axial foot style, Rod side flange style, Head side flange style, Single clevis style, Double clevis style, Center trunnion style			

JIS Symbol
Double acting

Minimum Stroke for Auto Switch Mounting

Refer to page 12 for "Minimum Stroke for Auto Switch Mounting".

Standard Stroke

Bore size (mm)	Max. * stroke
125	1600
160	1600
200	2000
250	2400

Intermediate strokes are available.

* Please consult with SMC for longer strokes.

Theoretical Output

Bore size (mm)	Rod diameter (mm)	Operating direction	Piston area (mm ²)	Operating pressure (MPa)								
				0.2	0.3	0.4	0.5	0.6	0.7	0.8	0.9	1.0
125	32	OUT	12272	2454	3682	4909	6136	7363	8590	9818	11045	12272
		IN	11468	2294	3440	4587	5734	6881	8028	9174	10321	11468
160	40	OUT	20106	4021	6032	8042	10053	12064	14074	16085	18095	20106

		IN	47124	9425	14137	18850	23562	28274	32987	37699	42412	47124

Note) Theoretical force (N) = Pressure (MPa) x Piston area (mm²)

Weight/Aluminum Tube

Bore size (mm)		125	160	200	250
Basic weight	Basic style	7.45	14.54	20.20	37.17
	Foot style	2.60	4.90	7.76	15.00
	Flange style	4.10	2.45	11.75	20.29
	Single clevis style	4.15	6.90	9.10	18.60
	Double clevis style	4.25	6.30	9.25	18.46
	Trunnion style	2.98	4.50	7.23	14.40
Additional weight per each 50 mm of stroke	All mounting brackets	0.54	0.83	0.90	1.60
Accessory	Single rod clevis	1.20	1.62	1.62	2.76
	Double clevis (With pin)	1.84	3.92	3.92	6.69

Calculation: (Example) CP95SD160-100

- Basic weight 14.54 (kg) (Basic, ø160)
- Mounting 6.30 (kg) (Double clevis)
- Additional weight ... 0.83 (kg/50 st)
- Cylinder stroke 100 (st)

$$14.54 + 0.83 \times 100 \div 50 + 6.30 = 22.50 \text{ kg}$$

Allowable Kinetic Energy

Example: Load limit at rod end when air cylinder ø200 is actuated with max. actuating speed 500 mm/s. See the intersection of lateral axis 500 mm/s and ø200 line, and extend the intersection to left. Thus the allowable load is 800 kg.

Construction

	Reed switch	Solid state switch
125 to 200	≤ 2 mm	≤ 1 mm
250	≤ 3 mm	≤ 1 mm

Other than the applicable auto switches listed in "How to Order", the following auto switches can be mounted. For detailed specifications, refer to page 8-1.

Type	Model	Electrical entry	Features
Solid state switch	D-F5NTL	Grommet (In-line)	With timer
	D-Y69A/Y69B/Y7PV	Grommet (Perpendicular)	—
	D-Y7NWV/Y7PWV/Y7BWV		2-color indication

* With pre-wire connector is available for solid state auto switches. For details, refer to page 8-1.

* Normally closed (NC = b contact), solid state switch (D-Y7G/Y7H type) are also available. For details, refer to page 8-1.

Series C95

Specific Product Precautions

Be sure to read before handling.

Adjustment

Warning

1. Do not open the cushion valve above the stopper.

Cushion valves are provided with a retaining ring (ø125 to ø250) as a stopping mechanism, and the cushion valve should not be opened above that point.

If air is supplied and operation started without confirming the above condition, the cushion valve may be ejected from the cover.

Bore size (mm)	Cushion valve	Width across flats	Socket wrench
125, 160, 200, 250	MB-A2-10-EA064	4	JIS 4648 Hex spanner wrench 4

2. Be certain to activate the air cushion at the stroke end.

When it is intended to use the cushion valve in the fully opened position, select a style with a damper. If this is not done, the tie-rods or piston rod assembly will be damaged.

3. When replacing brackets, use the hexagon wrench shown below.

Bore size (mm)		Bolt	Width across flats	Tightening torque (Nm)
125		M12 x 1.75 x 25ℓ	10	30.1
160, 200		M16 x 2 x 30ℓ	14	99
250	Foot	M20 x 2.5 x 35ℓ	17	193.5
	Others	M20 x 2.5 x 30ℓ	17

Heat resistant cylinder ●

An air cylinder in which the materials of the seals and the grease have been changed so that the cylinder can be operated at high ambient temperatures of up to 150°C.

Note 1) Make sure to use without lubrication.

Note 2) Contact SMC for details on the maintenance intervals for this cylinder, which differ from those of the standard cylinder.

Note 3) It is not possible to manufacture this cylinder with an auto switch.

⚠ Warning Precaution

Be aware that smoking cigarettes, etc. after your hands have come into contact with the grease used in this cylinder can create a gas that is hazardous to humans.

Model Selection Procedures

Made to Order Common Specifications -XC4: With Heavy Duty Scraper

6	With Heavy Duty Scraper	Symbol	-XC4
----------	--------------------------------	---------------	-------------

As it uses a powerful scraper for the wiper ring, this cylinder is suitable for use in an area that is dusty, or in an environment in which mud splashes on the cylinder, such as when operating casting equipment, construction equipment, or an industrial vehicle.

Specifications

Applicable cylinder	Air cylinder/Standard
Series	C95, CP95
	C95, CP95, C95W, CP95W
Action	Double acting single rod/double rod
Bore size (mm)	32, 40, 50, 63, 80, 100
Wiper ring	SCB scraper
Cushion	Air cushion
Auto switch	Available for mounting (Bore size 200mm or less)
Additional specifications, refer to	Refer to chapter C95, CP95

⚠ Cautions

Heavy duty scraper should not be changed.

- Change not only the cover but also the rod cover assembly since heavy duty scraper is pressed in.

Made to Order Common Specifications

Stroke B-A

Add'l
symbol

XC11

Dual stroke cylinder/Single rod

Two cylinders can be integrated by connecting them in line, and the cylinder stroke can be controlled in two stages in both directions.

When air pressure is supplied to the B port, both A and B strokes extend.

When air pressure is supplied to the A port, the rod out by the A stroke length.

When air pressure is supplied to the C port, the rod out by the B stroke length.

When air pressure is supplied to both ports A and C, double output force is obtainable in the range of the A stroke length.

⚠️ Precaution

1. Do not supply air until the cylinder is fixed with the attached bolt.
2. If air is supplied without securing the cylinder, the cylinder could lurch, posing the risk of injury to personnel or damage to the peripheral equipment.

Tandem cylinder

This is a cylinder produced with two air cylinders in line allowing double the output force.

When air pressure is supplied to ports B and D, the output force is doubled in the extend stroke.

When air pressure is supplied to ports A and C, the output force is doubled in the out stroke.

Specifications

Applicable cylinder	Air cylinder/Standard
Series	C95, CP95
Action	Double acting single rod
Bore size (mm)	32, 40, 50, 63, 80, 100
Min. operating pressure	0.1MPa
Cushion	Air cushion
Auto switch	Available for mounting
Mounting	Basic, Foot, Front flange, Rear flange, Single clevis, Double clevis

—XC22

Fluorine Rubber Seals

Material for seals is changed to fluorine rubber excellent in chemical resistance.

- Note 1) It might not be possible to use this material depending on the chemicals or operating temperatures to which it will be exposed. Therefore, contact SMC before use.
- Note 2) Although we can manufacture cylinders with auto switches, the parts that are related to the auto switches (the auto switches themselves, mounting brackets, and built-in magnets) are identical to the standard products. Therefore, before using them, contact SMC regarding their compatibility with the operating environment.

⚠ Precautions

Auto Switch Common Specifications

Auto switch style	Reed switch	Solid state switch
Current leakage	None	3 wire: 100 μ A or less, 2 wire: 1mA or less
Operating time	1.2ms	1ms or less ⁽³⁾
Shock resistance	300m/s ²	1000m/s ²
Insulation resistance	50 M Ω or more at 500MV DC (between lead wire and the case)	
Withstand voltage	1500V AC/min. (between lead wire and the case) ⁽¹⁾	1000V AC/min. (between lead wire and the case)
Ambient temperature	-10 to 60°C	
Protective construction	IEC529 Standard IP67, Waterproof construction (JISC0920) ⁽²⁾	

Note 1) Connector style (D-A73C/A80C/C73C/C80C) and D-9/9□A/A9/A9□V style: 1000V AC/min. (between lead wire and the case)

Note 2) IEC529 Standard IP63, Rainproof construction (JISC0920) for Terminal conduit style (D-A3/A3□A/A3□C/G39/G39A/G39C/K39/K39A/K39C) and DIN terminal style (D-A44/A44A/A44C).

Note 3) Except solid state switch with timer (D-M5□TL, G5NTL, F7NTL, F5NTL) and **Auto switch for strong magnetic field resistance (D-P5DWL)**.
D-J51: 5ms or less

Lead Wire Length

How to Order Ex.)

D-A73 L

•Lead wire length

—	0.5m
L	3m
Z	5m
N*	None

* Applicable for the connector style (D- ** C) only

Note 1) Applicable auto switch with 5 meter lead wire ("Z")
Reed switch: D-B53/B54, D-C73 (C)/C80C, D-A73(C)(H)/A80C
D-A53/A54, D-Z73, D-90/97/90A/93A

Solid state switch: Manufactured upon receipt of order as standard
(Except D-F9/F9□V)

Note 2) The standard lead wire length of solid state switch with timer or with water resistant 2 colour indication is 3 meters. (Not available 0.5m)

Note 3) The standard lead wire length of strong magnetic field resistant solid state switch is 3 or 5 meters. (Not available 0.5m.)

Part No. of lead wire with connector

(Available for connector style only.)

Part No.	Lead wire length
D-LC05	0.5m
D-LC30	3m
D-LC50	5m

Change of Lead Wire Colour

Lead wire colours of SMC auto switches have been changed in order to meet Nippon Electric Control Equipment Industries Association Standard No. 402.

2 wire auto switch

	Old	New
Output (+)	Red	Brown
Output (-)	Black	Blue

Solid state auto switch with diagnostic output

	Old	New
Power supply	Red	Brown
GND	Black	Blue
Output	White	Black
Diagnostic output	Yellow	Orange

3 wire auto switch

	Old	New
Power supply	Red	Brown
GND	Black	Blue
Output	White	Black

Solid state auto switch with latching style diagnostic output

	Old	New
Power supply	Red	Brown
GND	Black	Blue
Output	White	Black
Latching style diagnostic output	Yellow	Orange

Prior to Use

Auto Switch Hysteresis/Contact Protection Box

Contact Protection Box/CD-P11, CD-P12

①

The following auto switches are not incorporated with the contact protection box.

D-A7/A8, D-A7□H/A80H, D-A73C, A80C, D-C7/C8, D-C73C/C80C, D-E7□A, E80A, D-Z7/Z8, D-9/9□A, D-A9/A9□V, and D-A79W type

Use an auto switch with a contact protection box in any case listed below. Unless using a contact protection box, the contact life may be shortened.

(Due to permanent energizing conditions.)

D-A72(H) must be used with the contact protection box regardless of load styles and lead wire length.

- ① Operating load is an inductive load.
- ② The wiring length to load is more than 5m.
- ③ The load voltage is 100 or 200 V AC.

②

Contact SMC when using built-in contact protection circuit style (D-A34[A] [C], D-A44[A] [C], D-A54/A64, D-B54/B64, D-A59W, D-B59W) in the following conditions:

- ① The wiring length to load is more than 30m.
- ② When using PLC with large flow current

Contact Protection Box/Specifications

Part No.	CD-P11		CD-P12
Load voltage	100V AC max.	200V AC	24V DC
Max. load current	25mA	12.5mA	50mA

Lead wire length - Switch connecting side 0.5m
Load connecting side 0.5m

Contact Protection Box/Internal Circuit

(): If applicable for IEC Standard

CD-P11

CD-P12

Contact Protection Box/Dimensions

Auto Switch Hysteresis

The distance between the turn-on point (ON) of the switch by moving of the piston to the turn-off point (OFF) is called "Hysteresis". This hysteresis is included as part of the operating range (one side).

Contact Protection Box/Connection Method

For connection of the switch body and the contact protection box, connect the lead wire in the side indicated as "SWITCH" on the contact protection box to the lead wire from the switch body. The length of lead wire between the switch body and the contact protection box should be within 1m and they should be set as close together as possible.

Prior to Use

Auto Switch Connection Method/Connection Example

Basic Wiring

•Solid state switch 3 wire NPN

3 wire PNP

2 wire

•Reed switch 2 wire

Typical PLC (Programmable Logic Controller) Connection Circuits

•Sink input 3 wire NPN

2 wire

•Source input 3 wire PNP

2 wire

Connect according to the input specification of PLC because the connection method varies with the input specification of PLC.

AND (Serial), OR (Parallel) Connection Examples

•3 wire

NPN/AND connection (with relay)

NPN/AND connection (with switch)

NPN/OR connection

Indication lights up when both switches are ON.

•2 wire (2 pcs.) AND connection

Load voltage at ON=Supply voltage-Internal drop voltage X 2 pcs.
=24V-4V X 2 pcs.
=16V

Example) Supply voltage 24V DC, switch internal drop voltage 4V

OR connection

Load voltage at OFF=Leakage current X 2 pcs. X Load impedance
=1mA X 2 pcs. X 3kΩ
=6V

Example) Load impedance 3kΩ, switch leakage current 1mA

[Solid state switch]

When 2 switches are connected by OR, load voltage will increase at OFF and these connections may cause malfunction.

[Reed switch]

There is no current leakage so that load voltage does not increase at OFF.

The flowing current is broken up into the ON-state switches, so indicator light becomes dark or may not turn ON due to the lack of the current.

D-A72H

D-A73H

D-A76H

D-A80H

Note) ① In the case operation load is an inductive load.

② In the case the wiring length to load is ">" 5m.

③ In the case the load voltage is 100 or 200V AC.

Be sure to use the auto switch with the contact protection box in any case mentioned above.

D-A72H must be used with contact protection box.

Refer to p.8-5 for the details of contact protection box.

Dimensions

Reed Switch/Rail Mounting

D-A73C/D-A80C

Connector

Applicable Actuator Series

Series	Bore size (mm)
CD85	ø8, ø10, ø12, ø16, ø20, ø25,
CD76	ø32, ø40

Specifications

PLC: Programmable Logic Controller

D-A73C (With indicator light)

Auto switch model number	D-A73C
Application	Relay/PLC
Load voltage	24V DC
Load current range	5 to 40mA
Contact protection circuit	None
Internal voltage drop	≤ 2.4V
Indicator light	ON: When red light emitting diode

D-A80C (Without indicator light)

Auto switch model number	D-A80C
Application	Relay/IC circuit/PLC
Load voltage	24V ^{AC} / _{DC}
Max. load current	50mA
Contact protection circuit	None
Internal resistance	1Ω or less (Including 3m lead wire)

● Lead wire — Oilproof vinyl heavy insulation cable, ø3.4, 0.2mm², 2 cores (Brown, Blue), 0.5m

Note 1) Refer to common specifications on p.8-4.

Note 2) Refer to p.8-4 for lead wire length.

Note 3) Lead wire with connector may be shipped with switch.

Caution

Precautions

- ① Confirm that the connector is appropriately tightened. If tightened insufficiently, the water resistant performance will deteriorate.
- ② Refer to p.8-52 for the details.

Internal Circuit

(): If not applicable for IEC Standard

Note) ① In the case operation load is an inductive load.

② In the case the wiring length to load is ">" 5m.

Be sure to use the auto switch with the contact protection box in any case mentioned above. Refer to p.8-5 for the details of contact protection box.

Dimensions

*D-J51 differs in the shape, most sensitive position and operation range from other switches.
Contact SMC for the details.

Solid State Switches: Direct Mounting Type D-M9N(V), D-M9P(V), D-M9B(V) (C)

Refer to www.smcworld.com for details of products compatible with overseas standards.

Auto Switch Specifications

PLC: Programmable Logic Controller

Grommet

- 2-wire load current is reduced (2.5 to 40 mA).
- Lead-free
- Use of lead wire compliant with UL standards (style 2844)
- 1.5 times the flexibility compared with conventional products (comparison with other SMC products)

D-M9□

D-M9□V

⚠ Caution

Operating Precautions

When the cable sheath is stripped, confirm the stripping direction.

The insulator may be split or damaged depending on the direction.

2 Colour Indication Style with Diagnostic Output Solid State Switch/Band Mounting

D-H7LF (Latching Style)

Grommet

The output signal can be detected in an unsteady detecting area.

Internal Circuit

(): If not applicable for IEC Standard

Dimensions

Applicable Actuator Series

Series	Bore size (mm)
CD85	ø8, ø10, ø12, ø16, ø20, ø25,
CD76	ø32, ø40

Specifications

PLC: Programmable Logic Controller

D-H7LF (With indicator light)	
Auto switch model number	D-H7LF
Wiring	4 wire
Output	NPN
Diagnostic output	Latching operation
Application	24V DC Relay/PLC
Power voltage	24V DC (20 to 26V DC)
Current consumption	≤ 20mA
Load voltage	≤ 26V DC
Load current	≤ 40mA
Internal voltage drop	≤ 0.8V
Current leakage	≤ 100μA at 24V DC
Indicator light	Operating point: Red light emitting diode Suitable operating point: Green light emitting diode Orange colour indicator lights on when diagnostic output is ON.

● Lead wire — Oilproof vinyl heavy insulation cable, ø3.4, 0.2mm², 4 cores (Brown, Black, Orange, Blue), 0.5m
Note 1) Refer to common specifications on p.8-4.
Note 2) Refer to p.8-4 for lead wire length.

Diagnostic Output Operation

The diagnostic signal is output when detecting position remains within unsteady area (where indicator light is Red.) for more than 0.5 sec. This signal keeps outputting even after normal output goes to OFF. The diagnostic output becomes OFF when detecting position remains within the most suitable operating range (where indicator light is Green.) for more than 0.5 sec.

2 Colour Indication Style with Diagnostic Output Solid State Switch/Band Mounting

D-H7NF

Grommet

The output signal can be detected in an unsteady detecting area.

Applicable Actuator Series

Series	Bore size (mm)
CD85	ø8, ø10, ø12, ø16, ø20, ø25,
CD76	ø32, ø40

Specifications

PLC: Programmable Logic Controller

D-H7NF (With indicator light)	
Auto switch model number	D-H7NF
Wiring	4 wire
Output	NPN
Diagnostic output	Normal operation
Application	IC circuit/Relay/PLC
Power voltage	5/12/24V DC (4.5 to 28V DC)
Current consumption	≤ 10mA
Load voltage	≤ 28V DC
Load current	≤ 40mA
Internal voltage drop	≤ 1.5V (≤ 0.8V at 10mA)
Current leakage	≤ 100μA at 24V DC
Indicator light	Operating point: Red light emitting diode Suitable operating point: Green light emitting diode

● Lead wire — Oilproof vinyl heavy insulation cable, ø3.4, 0.2mm², 4 cores (Brown, Black, Orange, Blue), 0.5m

Note 1) Refer to common specifications on p.8-4.

Note 2) Refer to p.8-4 for lead wire length.

Internal Circuit

(): If not applicable for IEC Standard

Diagnostic Output Operation

The diagnostic output is detected when detecting position remains at unsteady area only, not available at the most suitable operating area, thus diagnostic signal can be output only when the detecting position is far from the suitable position for normal operation.

Dimensions

D-F7LF (Latching Style)

The output signal can be detected in an unsteady detecting area.

(): If not applicable for IEC Standard

Series	Bore size (mm)
CD85	ø8, ø10, ø12, ø16, ø20, ø25,
CD76	ø32, ø40

PLC: Programmable Logic Controller

Auto switch model number	D-F7LF
Wiring	4 wire
Output	NPN
Diagnostic output	Latching operation
Application	24V DC Relay/PLC
Power voltage	24V DC (20 to 26V DC)
Current consumption	≤ 20mA
Load voltage	≤ 26V DC
Load current	≤ 40mA
Internal voltage drop	≤ 0.8V
Current leakage	≤ 100μA at 24V DC
Indicator light	Operating point: Red light emitting diode Suitable operating point: Green light emitting diode Orange colour indicator lights on when diagnostic output is ON.

Note 2) Refer to p.8-4 for lead wire length.

The diagnostic signal is output when detecting position remains within unsteady area (where indicator light is Red.) for more than 0.5 sec. This signal keeps outputting even after normal output goes to OFF. The diagnostic output becomes OFF when detecting position remains within the most suitable operating range (where indicator light is Green.) for more than 0.5 sec.

2 Colour Indication Style with Diagnostic Output Solid State Switch/Rail Mounting

D-F79F

Grommet

The output signal can be detected in an unsteady detecting area.

Internal Circuit

The output signal can be detected in an unsteady detecting area.

Applicable Actuator Series

Series	Bore size(mm)
C95	ø32, ø40, ø50, ø63, ø80, ø100, ø125, ø160, ø200, ø250

Specifications

PLC: Programmable Logic Controller

D-F5LF (With indicator light)	
Auto switch model number	D-F5LF
Wiring	4 wire
Output	NPN
Diagnostic output	Latching operation
Application	24V DC Relay/PLC
Power voltage	24V DC (10 to 26V DC)
Current consumption	20mA
Load voltage	≤ 26V DC
Load current	≤ 40mA
Internal voltage drop	≤ 0.8V
Current leakage	≤ 100μA at 24V DC
Indicator light	Operating point: Red light emitting diode Suitable operating point: Green light emitting diode Orange colour indicator lights on when diagnostic output is ON.

●Lead wire — Oilproof vinyl heavy insulation cable, ø4, 0.2mm², 4 cores (Brown, Black, Orange, Blue), 0.5m
Note 1) Refer to common specifications on p.8-4. Note 2) Refer to p.8-4 for lead wire length.

Diagnostic Output Operation (Latching Style)

The diagnostic signal is output when detecting position remains within unsteady area (where indicator light is Red.) for more than 0.5 sec. This signal keeps outputting even after normal output goes to OFF. The diagnostic output becomes OFF when detecting position remains within the most suitable operating range (where indicator light is Green.) for more than 0.5 sec.

Internal Circuit

(): If not applicable for IEC Standard

Dimensions

Solid State Switch with Prewired Connector

D-□□□PC

Eliminates troublesome connections

Harnessing work is reduced by the cable with connector specifications

Employs international standard (IEC947-5-2) connector

IP67 construction

How to Order

D — M9N S A PC

Solid state switch standard part number

* Refer to the table below for applicable auto switch part numbers.

Cord length

S	0.5m
M	1.0m
L	3.0m

Note) L is available for series D-P5DW only.

Connector type

A	M8-3 pin
B	M8-4 pin
D	M12-4 pin

Note) Series D-P5DW is available with type D only.

Connector specifications

Connector type	M8-3 pin	M8-4 pin	M12-4 pin
Pin arrangement			
Applicable standards	JIS C 4524, JIS C 4525, IEC 947-5-2, NECA 0402		
Impact resistance	300m/s² {30, 6G}		
Enclosure	IP-67 (standard IEC529)		
Insulation resistance	100MΩ or more at 500VDC		
Withstand voltage	1500VAC for 1 min. (between connectors), leakage current 1mA or less		

Applicable Auto Switches

Information 1

Plug-in Connector Assembly/How to Use DIN Terminal

Plug-in Connector Assembly

D-A73C, D-A80C, D-J79C

D-C73C, D-C80C, D-H7C

With the convex part of the connector, insert the connector into the auto switch into the sleeve. Screw the locking ring onto the switch. (Do not tighten with pliers.)

How to Use DIN Terminal/D-A44/A44A/A44C

Connection

- ① Loosen the set screw and pull out the connector from the pin plug.
- ② Be sure to remove the set screw first and then insert a screw driver into a recessed groove under the terminal block to separate the terminal cover from the terminal block.
- ③ Follow the procedures and connect wires securely to specified terminals.
- ④ In standard cases, crimp-style terminals are used to connect wires. Please select proper crimp-style terminals so that the wire can be properly connected to terminal fittings.

Method of connection

AC: Connect to terminal No.1 and No.2

DC: Connect (+) to No.1 terminal and (-) to No.2 terminal.

How to change position of electrical entry

After separating the terminal block from the terminal cover, change the position of the terminal cover to any desired direction (4 directions at every 90°) to change the position of electrical entry.

Caution

When taking in or out the connector pin to or from the pin plug, hold the connector as perpendicular as possible.

Applicable cable (heavy insulation cable)

Applicable to cable O. D. of $\phi 6.8$ to $\phi 11.5$.

Applicable crimp-style terminal

1.25Y-3L, 1.25-3.5S, 1.25-4M

Information 2

How to Mount and Move the Auto Switch

Mounting Bracket Band mounting

⚠ Caution

- ① Tighten the screw under the specified torque when mounting auto switch.
- ② Set the mounting band perpendicularly to cylinder tube.

Correct mounting

Wrong mounting

<Applicable auto switch>

Reed switch D-B53, D-B54, D-B64
D-B59W

Solid state switch D-G59, D-G5P, D-K59, D-G5BAL
D-G59W, D-G5PW, D-K59W
D-G59F
D-G5NTL

How to mount and move the auto switch

- ① Put a mounting band on the cylinder tube and set it at the auto switch mounting position.
- ② Put the mounting section of the auto switch between the band mounting holes, then adjust the position of mounting holes of switch to those of mounting band.
- ③ Lightly thread the auto switch mounting screw through the mounting hole into the thread part of band fitting.
- ④ After setting the whole body to the detecting position by sliding, tighten the mounting screw to secure the auto switch. (The tightening torque of M4 screw should be about 1 to 1.2Nm.)
- ⑤ Modification of the detection position should be made in the condition of ③.

Part No. of auto switch mounting bracket (including band and screw)

Mounting screw set (Stainless steel specification)

Use the following mounting screw set (Set screw included.) according to the required operating conditions. (Mounting band is not included.)

BBA3: For D-B5/B6/G5/K5

D-G5BAL is mounted on the cylinder with the above stainless steel screw BBA3 before shipment or BBA3 is enclosed with D-G5BAL when shipped without cylinder.

<Applicable auto switch>

Reed switch D-C73, D-C76, D-C80
D-C73C, D-C80C

Solid state switch D-H7A1, D-H7A2, D-H7B, D-H7BAL
D-H7C
D-H7NF, D-H7LF
D-H7NW, D-H7PW, D-H7BW

How to mount and move the auto switch

- ① For series CDJ2/ Put a mounting bracket on the cylinder tube. For series CDM2/ Put a mounting band on the cylinder tube and set it at the auto switch mounting position.
- ② Put the mounting part of auto switch in the interval of stationary fitting to fit the mounting hole to the hole of stationary fitting.
- ③ Screw lightly the auto switch mounting screw through the mounting hole into the thread part of band fitting.
- ④ After setting the whole body to the detecting position by sliding, tighten the mounting screw to secure the auto switch. (The tightening torque of M3 screw should be about 0.8 to 1Nm.)
- ⑤ Modification of the detection position should be made in the condition of ③.

D-F79W, D-F7PW, D-J79W, D-F7NWV, D-F7BWV
D-F79F, D-F7LF, D-F7BAL, D-F7NTL

How to mount and move the auto switch

- ① Slide the auto switch mounting nut inserted into the mounting rail and set it at the auto switch mounting position.
- ② Fit the convex part of auto switch mounting arm into the concave part of auto switch mounting rail. Then slide the switch over the nut.
(CDQ2 series: Fit the convex part of auto switch mounting arm through the auto switch spacer into the concave part of auto switch mounting rail.)

- ③ Push the auto switch mounting screw lightly into the mounting nut through the hole of auto switch mounting arm.
- ④ After reconfirming detection position, tighten the mounting screw to secure the auto switch. (Tightening torque of M3 screw should be 0.5 to 0.7Nm.)
- ⑤ Modification of the detecting position should be made in the condition of ③.

Part No. of auto switch mounting bracket (including nut, screw and spacer)

Model Selection
Procedures

Air Cylinder Model Selection Procedures

Step

1

Obtain the bore of the cylinder tube. → Refer to Graphs 1 and 2.

① Determine the load factor in accordance with the purpose.

Purpose of operation		Load factor η
Static operation (clamping, low speed vise crimping, etc.)		0.7 or less (70% or less)
Dynamic operation	Horizontal movement of load on guide	1 or less (100% or less)
	Vertical and horizontal movement of the load	0.5 or less (50% or less) ⁽¹⁾

Note 1) If it is particularly necessary to operate at high speeds, the load rate must be reduced further. (In the graph, it is possible to select a load rate of 0.4, 0.3, 0.2, or less.)

② Determine the operating pressure.

Generally, set the regulator to 85% of the source air pressure.
(In the graph, a selection between 0.2MPa and 0.8MPa is possible.)

③ Determine the direction in which the cylinder force will be used.

Extending side → Refer to Graph 1.

Retracting side → Refer to Graph 2.

Note: If the same load is applied both for pushing and pulling in a horizontal operation, set the direction to the pulling side.

Step

2

Take the impact at the stroke end into consideration.

① When an external stopper (shock absorber, etc.) is provided to absorb the impact, select a stopper with sufficient absorption capacity.

② Stopping the piston with the cylinder without a stopper:

Verify in Graphs 3 to 7 the absorption capacity of the cushion that is enclosed in the cylinder.

1) Rubber bumper: Urethane rubber is used for preventing metal-to-metal contact between the piston and the cover.

2) Air cushion: The air in the exhaust side is compressed slightly before the stroke end, and its reaction force absorbs the kinetic energy of the load, thus enabling the piston to stop quietly.

Step

3

The aspects indicated below may need to be taken into consideration, depending on how the cylinder is operated.

① If a lateral load is applied to the piston rod:

Verify in Graphs 8 to 11 whether the lateral load is within an allowable range.

② When using a cylinder with a relatively long stroke, if a buckling force acts on the piston rod or the cylinder tube, verify in the table whether the stroke or the operating pressure is within a safe range.

Step

4

Obtain the cylinder's air consumption and required air volume.

Obtain the air consumption (Graphs 12, 13) that is necessary for selecting a compressor and for calculating the running cost and the required air volume (Graph 14) that is necessary for selecting equipment such as an air filter or a regulator, or the size of the piping upstream.

Step

1

Obtain the bore of the cylinder tube. → Refer to Graphs 1 and 2.

<Graph 1> Extending side cylinder force (Double acting cylinder)

Example:

Example 1: If a minimum force of 1000N is necessary to keep the workpiece pressed as shown in Fig. 1, because this is the extending side, use Graph 1 to determine the load factor of 0.7 and the operating pressure of 0.5MPa. Then, seek the point at which the cylinder force of 1000N intersects, and this will result in a bore size of 63mm.

Conversion to gravitational units

$1\text{MPa} \approx 10.2\text{kgf/cm}^2$	$1\text{N} \approx 0.102\text{kgf}$
$1\text{kgf/cm}^2 \approx 0.098\text{MPa}$	$1\text{kgf} \approx 9.8\text{N}$

<Graph 2> Retracting side cylinder force (Double acting cylinder)

Example:

Example 2: To move a load with a 30kg weight horizontally on a guide as shown in Fig. 2, because the load is the same for both the pushing and retracting sides, use Graph 2, which is the retracting side with a smaller force. Determine the load factor of 1, and the operating pressure of 0.4MPa. Then, seek the point at which it intersects with the load weight of 30kg, and this will result in a bore size of 40mm.

Example 3: To pull a load with a 100kg weight vertically upward as shown in Fig. 3, use Graph 2 to determine the load factor of 0.5 and the operating pressure of 0.5MPa. Then, seek the point at which it intersects with the load weight of 100kg, and this will result in a bore size of 80mm.

Air Cylinder Model Selection Procedures

Step

2

Take the impact at the stroke end into consideration.

How to view the Graphs

Example 1: According to Graph 3, to move a load weight of 50kg using CM2-40A, it is necessary to set the maximum speed at 300mm/s or less, considering the capacity of the air cushion.

Air Cylinder Model Selection Procedures

Step

3

The aspects indicated below may need to be taken into consideration, depending on how the cylinder is operated.

- ① The maximum stroke at which the cylinder can be operated under a lateral load.

The region that does not exceed the bold solid line represents the allowable lateral load in relation to the cylinder of a given stroke length. In the graph, the range of the broken line shows that the long stroke limit has been exceeded. In this region, as a rule, operate the cylinder by providing a guide along the direction of movement.

Air Cylinder Model Selection Procedures

② The relationship between the cylinder size and the maximum stroke depending on the mounting style

Assuming that the force that is generated by the cylinder itself acts as a buckling force on the piston rod or on the piston rod and the cylinder tube, the table below indicates in centimeters the maximum stroke that can be used, which was obtained through calculation.

Therefore, it is possible to find the maximum stroke that can be used with each cylinder size according to the relationship between the level of the operating pressure and the type of cylinder mounting, regardless of the load factor.

Reference: Even under a light load, if the piston rod has been stopped by an external stopper at the extending side of the cylinder, the maximum force generated by the cylinder will act upon the cylinder itself.

Air Cylinder Model Selection Procedures

Step

4

Obtain the cylinder's air consumption and its required air volume.

Cylinder's air consumption and its required air volume

In equipment that uses a cylinder, air consumption is the volume of air that is consumed in the cylinder, or in the piping between the cylinder and the switching valve, every time the switching valve operates. This is necessary for selecting a compressor and for calculating the running cost. The required air volume is the volume of air that is necessary for operating a specified load at a specified speed, and it is necessary for selecting the F.R.L. equipment or the size of the upstream piping.

How to obtain the air consumption/How to view Graphs 12, 13

Step 1 Using Graph 12, obtain the air consumption of the air cylinder.

- ① Seek the point at which the operating pressure (diagonal line) intersects with the cylinder stroke, and from that point, perpendicularly extend a vertical line upward.
- ② From the point at which it intersects with the bore size (diagonal line) of the cylinder to be used, look sideways (either to the right or left) to obtain the air consumption that is required by one cycle of the air cylinder.

Step 2 Using Graph 13, obtain the air consumption of the tube or steel pipe in the same way as in step 1.

Step 3 Obtain the total air consumption per minute as described below.
(air consumption of air cylinder + air consumption of tube or steel pipe) X number of cycles per minute X number of cylinders being used = total air consumption [unit: L/min (ANR)]

Note: In selecting a compressor, the temperature drop, leakage, and consumption by the intermediary equipment must be taken into consideration. Thus, select one with a generous capacity, with a discharge that exceeds the total air consumption indicated above. (Reference: At a minimum, select one with 1.4 times the volume; select one with a higher volume as needed.)

Example: When 10 air cylinders with a 50mm bore size and a 600mm stroke are used at a pressure of 0.5MPa, what is the air consumption of their 5 cycles per minute?
(A 2m tube with a 6mm bore is used for piping between the cylinders and the switching valve.)

1. Operating pressure 0.5MPa → cylinder stroke 600mm → bore size 50mm → air consumption volume ≈ 13 l (ANR)
2. Operating pressure 0.5MPa → piping length 2m → bore 6mm → air consumption ≈ 0.56 l (ANR)
3. Total air consumption = (13 + 0.56) X 10 X 5 = 678 l/min (ANR)

How to obtain the required air volume/How to view Graph 14

Step 3 Using Graph 14, obtain the air cylinder's required air volume.

- ① Seek the point at which the operating pressure (diagonal line) intersects with the maximum piston speed, and from that point, perpendicularly extend a vertical line upward.
- ② From the point at which it intersects with the bore size (diagonal line) of the cylinder to be used, look sideways (either to the right or left) to obtain the required air consumption.

Example: What is the required air volume for operating a cylinder with a bore size of 50mm, at a pressure of 0.5MPa, and at a speed of 500mm/s?

How to: Operating pressure 0.5MPa → maximum piston speed
view 500mm/s → bore size 50mm → then, a required air volume 350 l/min (ANR) can be obtained.

<Graph 12> Cylinder's air consumption (For one cycle)

<Graph 13> Air consumption of tube or steel pipe (For one cycle)

* The piping length is the length of the steel pipe or tube that connects the cylinder with the switching valve (solenoid valve, etc.).

<Graph 14> Required air volume of cylinder and piping

Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard by labeling "**Caution**", "**Warning**" or "**Danger**". To ensure safety, be sure to observe ISO4414 ^{Note 1)}, JIS B 8370 ^{Note 2)} and other safety practices.

-  **Caution:** Operator error could result in injury or equipment damage.
-  **Warning:** Operator error could result in serious injury or loss of life.
-  **Danger:** In extreme conditions, there is a possibility of serious injury or loss of life.

Note 1) ISO4414: Pneumatic fluid power - Recommendations for the application of equipment to transmission and control systems.

Note 2) JIS B 8370: Pneumatic system axiom.

Warning

①The compatibility of pneumatic equipment is the responsibility of the person who designs the pneumatic system or decides its specifications.

Since the products specified here are used in various operating conditions, their compatibility with the specific pneumatic system must be based on specifications or after analysis and/or tests to meet your specific requirements.

②Only trained personnel should operate pneumatically operated machinery and equipment.

Compressed air can be dangerous if an operator is unfamiliar with it. Assembly, handling or repair of pneumatic systems should be performed by trained and experienced operators.

③Do not service machinery/equipment or attempt to remove components until safety is confirmed.

1. Inspection and maintenance of machinery/equipment should only be performed after confirmation of safe locked-out control positions.
2. When equipment is to be removed, confirm the safety process as mentioned above. Cut the supply pressure for the equipment and exhaust all residual compressed air in the system.
3. Before machinery/equipment is re-started, take measures to prevent quick extensions of the cylinder piston rod etc. (Bleed air into the system gradually to create back-pressure.)

④Contact SMC if the product is to be used in any of the following conditions:

1. Conditions and environments beyond the given specifications, or if product is used outdoors.
2. Installation on equipment in conjunction with atomic energy, railway, air navigation, vehicles, medical equipment, food and beverage, recreation equipment, emergency stop circuits, press applications, or safety equipment.
3. An application which has the possibility of having negative effects on people, property, or animals,

Actuator Precautions^①

Be sure to read before handling.

Refer to main text for detailed precautions on every series.

Design

⚠ Warning

- ① **There is a possibility of dangerous sudden action by air cylinders if sliding parts of machinery are twisted due to external forces, etc.**

In such cases, human injury may occur; e.g., by catching hands or feet in the machinery, or damage to the machinery itself may occur. Therefore, the machine should be designed to avoid such dangers.

- ② **A protective cover is recommended to minimize the risk of personal injury.**

If a stationary object and moving parts of a cylinder are in close proximity, personal injury may occur. Design the structure to avoid contact with the human body.

- ③ **Securely tighten all stationary parts and connected parts so that they will not become loose.**

When a cylinder operates with high frequency or a cylinder is installed where there is a lot of vibration, ensure that all parts remain secure.

- ④ **A deceleration circuit or shock absorber, etc., may be required.**

When a driven object is operated at high speeds or the load is heavy, a cylinder's cushion will not be sufficient to absorb the shock. Install a deceleration circuit to reduce the speed before cushioning, or install an external shock absorber to relieve the shock. In this case, the rigidity of the machinery should also be examined.

- ⑤ **Consider a possible drop in operating pressure due to a power outage, etc.**

When a cylinder is used in a clamping mechanism, there is a danger of work dropping if there is a drop in circuit pressure caused by a power outage, etc.

Therefore, safety equipment should be installed to prevent damage to machinery and human injury. Suspension mechanisms and lifting devices also require consideration for drop prevention.

- ⑥ **Consider a possible loss of power source.**

Measures should be taken to protect against human injury and equipment damage in the event that there is a loss of power to equipment controlled by air pressure, electricity or hydraulics, etc.

- ⑦ **Design circuitry to prevent sudden lurching of driven objects.**

When a cylinder is driven by an exhaust center directional control valve or when starting up after residual pressure is exhausted from the circuit, etc., the piston and its driven object will lurch at high speeds if pressure is applied to one side of the cylinder because of the absence of air pressure inside the cylinder.

Therefore, equipment should be selected and circuits designed to prevent sudden lurching, because there is a danger of human injury and/or damage to equipment when this occurs.

- ⑧ **Consider emergency stops.**

Design so that human injury and/or damage to machinery and equipment will not be caused when machinery is stopped by a safety device under abnormal conditions, a power outage or a manual emergency stop.

- ⑨ **Consider the action when operation is restarted after an emergency stop or abnormal stop.**

Design the machinery so that human injury or equipment damage will not occur upon restart of operation. When the cylinder has to be reset at the starting position, install manual safety equipment.

Selection

⚠ Warning

- ① **Check the specifications.**

The products advertised in this catalog are designed according to use in industrial compressed air systems. If the products are used in conditions where pressure, temperature, etc., are out of specification, damage and/or malfunction may be caused. Do not use under these conditions.

Consult SMC if you use a fluid other than compressed air.

- ② **Intermediate stops.**

When intermediate stopping of a cylinder piston is performed with a 3 position closed center directional control valve, it is difficult to achieve stopping positions as accurate and minute as with hydraulic pressure, due to the compressibility of air.

Furthermore, since valves and cylinders, etc. are not guaranteed for zero air leakage, it may not be possible to hold a stopped position for an extended period of time. Contact SMC in case it is necessary to hold a stopped position for an extended period.

⚠ Caution

- ① **Operate within the limits of the maximum usable stroke.**

Refer to the selection procedures for the air cylinder to be used for the maximum usable stroke.

- ② **Operate the piston within a range such that collision damage will not occur at the end of the stroke.**

Operate within a range such that damage will not occur when the piston having inertial force stops by striking the cover at the stroke end. Refer to the cylinder selection procedures for the range within which damage will not occur.

- ③ **Use a speed controller to adjust the cylinder drive speed, gradually increasing from a low speed to the desired speed setting.**

- ④ **Provide an intermediate support for a cylinder with a long stroke.**

If the cylinder has a long stroke, provide an intermediate support to prevent the rod from sagging and the tube from flexing, as well as to prevent damage to the rod due to vibrations or external loads.

Actuator Precautions^②

Be sure to read before handling.

Refer to main text for detailed precautions on every series.

Mounting

⚠ Caution

- ① **Make sure to connect the rod and the load so that their axial center and movement directions match.**

If they do not match, stress could be applied to the rod and the tube, causing the inner surface of the tube, the bushing, the rod surface, and the seals to wear and to become damaged.

- ② **When an external guide is used, connect the external slider and the load in such a way that there is no interference at any point within the stroke.**

- ③ **Do not scratch or gouge the sliding portion of the cylinder tube or the piston rod by striking it with an object, or squeezing it.**

The tube bore is manufactured under precise tolerances. Thus, even a slight deformation could lead to a malfunction. Furthermore, any scratches or gouges on the sliding portion of the piston rod could damage the seals, which could lead to air leakage.

- ④ **Prevent the rotating parts from seizing.**

Apply grease to the rotating parts (such as the pin) to prevent them from seizing.

- ⑤ **Do not use until you verify that the equipment can operate properly.**

After mounting, repair or modification, etc., connect the air supply and electric power, and then confirm proper mounting by means of appropriate function and leak inspections.

- ⑥ **Instruction manual.**

The product should be mounted and operated after thoroughly reading the manual and understanding its contents. Keep the instruction manual where it can be referred to as needed.

Piping

⚠ Caution

- ① **Preparation before piping.**

Before piping is connected, it should be thoroughly blown out with air (flushing) or washed to remove cutting chips, cutting oil and other debris from inside the pipe.

- ② **Wrapping of sealant tape.**

When connecting pipes and fittings, etc., be certain that cutting chips from the pipe threads and sealing material do not get inside the piping.

Also, when sealant tape is used, leave 1.5 to 2 thread ridges exposed at the end of the pipe/fitting.

Cushion

⚠ Caution

- ① **Readjust with the cushion needle.**

The cushion has been adjusted at the time of shipment. However, before operating the actuator, readjust the cushion needle that is provided on the cover, according to the size of the load and the operating speed. Turn the cushion needle clockwise to restrict the flow, which increases the cushioning effect. After completing the adjustment, securely tighten the lock nut.

- ② **Do not operate the actuator with the cushion needle fully closed.**

This could damage the seals.

Lubrication

⚠ Caution

- ① **Lubricating the lube style cylinder**

Install a lubricator in the circuit, and use class 1 turbine oil (non-additive) ISO VG32. Do not use machine oil or spindle oil.

- ② **Lubrication of cylinder.**

The cylinder has been lubricated for life at the factory and can be used without any further lubrication.

However, in the event that it will be lubricated, use class 1 turbine oil (with no additives) ISO VG32.

Stopping lubrication later may lead to malfunction due to the loss of the original lubricant. Therefore, lubrication must be continued once it has been started.

Air Supply

⚠ Warning

- ① **Use clean air.**

If compressed air includes chemicals, synthetic oils containing organic solvents, salt or corrosive gases, etc., it can cause damage or malfunction.

⚠ Caution

- ① **Install air filters.**

Install air filters at the upstream side of valves. The filtration degree should be 5 μ m or less.

- ② **Install an air dryer, after cooler, etc.**

Air that includes excessive condensate may cause malfunction of valves and other pneumatic equipment. To prevent this, install an air dryer, after cooler, etc.

- ③ **Use the product within the specified range of fluid and ambient temperature.**

Take measures to prevent freezing, since moisture in circuits will be frozen under 5°C, and this may cause damage to seals and lead to malfunction.

Refer to SMC's "Air Cleaning Equipment" catalog for further details on compressed air quality.

Actuator Precautions^③

Be sure to read before handling.

Refer to main text for detailed precautions on every series.

Operating Environment

Warning

- ① Do not use in environments where there is a danger of corrosion.

Refer to the construction drawings regarding cylinder materials.

- ② Install a cover over the rod if it is used in an area that is dusty, or in an environment in which water or oil splashes on the cylinder.

If the area is very dusty, use the type with a heavy duty scraper (-XC4). If fluids splash on the cylinder, use a cylinder with improved water resistance.

- ③ If auto switches will be used, do not use them in an environment in which strong magnetic fields are present.

Maintenance

Warning

- ① Maintenance should be done according to the procedures indicated in the operating manual.

If handled improperly, malfunction and damage of machinery or equipment may occur.

- ② Machine maintenance, and supply and exhaust of compressed air.

When machinery is serviced, first check measures to prevent dropping of driven objects and run-away of equipment, etc. Then cut off the supply pressure and electric power, and exhaust all compressed air from the system.

When machinery is restarted, check that operation is normal with actuators in the proper positions.

Caution

- ① Drain flushing.

Remove condensate from air filters regularly.

Actuator Precautions^④

Be sure to read before handling.

Refer to main text for detailed precautions on every series.

Air-hydro Cylinder

Design

⚠ Warning

- ① **Do not use an air-hydro cylinder near flames, or in equipment or machinery that exceeds an ambient temperatures of 60°C.**

Failure to observe this precaution could result in a fire, because an air hydro-cylinder uses hydraulic oil that is flammable.

⚠ Caution

- ① **Do not use it in an environment, equipment, or machine that is not compatible with oil mist.**

As an air-hydro cylinder generates oil mist during operation, it could affect the environment.

- ② **Make sure to install an exhaust cleaner on the directional control valve for the air-hydro cylinder.**

An air-hydro cylinder discharges a small amount of hydraulic oil through the exhaust port of the directional control valve, which could contaminate the surroundings.

- ③ **Install an air hydro cylinder in a location in which it can be serviced easily.**

Provide space for servicing the air-hydro cylinder, as it requires maintenance such as replenishing it with hydraulic fluid and bleeding of air.

Selection

⚠ Caution

- ① **Select an air-hydro cylinder in combination with an air-hydro unit.**

Because an air-hydro cylinder operates most favorably when it is combined with an air-hydro unit, select an appropriate air-hydro unit.

- ② **Set the load of the air-hydro cylinder to be 50% or less of the theoretical force.**

The load must be set to 50% or less in order for the air hydro cylinder to achieve the level of performance that is close to that of a hydraulic cylinder, such as constant speed operation and stopping accuracy.

Piping

⚠ Caution

- ① **For air-hydro cylinder piping, use self-aligning fittings.**

Do not use One-touch fittings for air-hydro cylinder piping, as they could lead to oil leakage.

- ② **For air-hydro cylinder piping, use hard nylon tubing or copper piping.**

Similar to a hydraulic circuit, a high surge pressure could be created in air hydro cylinder piping, depending on the operating pressure. Therefore, use piping materials that provide a higher level of safety.

Lubrication

⚠ Warning

- ① **Make sure to completely discharge the compressed air in the system before filling the air-hydro unit with hydraulic oil.**

Before filling the air-hydro unit with hydraulic oil, verify that proper measures are taken to prevent the driven objects from falling and that safety measures are taken to prevent the clamped objects from becoming detached. Then, shut off the air supply, turn off the power supply to the equipment, and discharge the compressed air.

It would be dangerous to open the oil inlet on the air hydro unit while compressed air remains in the air-hydro system because the hydraulic oil could spray out.

Maintenance

⚠ Caution

- ① **Bleed air from the air-hydro cylinder on a regular basis.**

Because pockets of air could be created in the air-hydro cylinder, bleed air from it periodically, such as at the beginning of work. Bleed air at the air hydro cylinder or at the air bleeder valve that is provided on the pipe.

- ② **Verify the oil level of the air hydro system on a regular basis.**

Because a small amount of hydraulic oil is discharged from the air-hydro cylinder and the air-hydro unit circuit, the oil level decreases gradually. Therefore, check the oil level and replenish the system with oil if necessary.

The oil level can be checked with a level gauge in the air-hydro converter.

Auto Switch Precautions①

Be sure to read before handling.

Refer to main text for detailed precautions on every series.

Design & Selection

⚠ Warning

① Confirm the specifications.

Read the specifications carefully and use this product appropriately. The product may be damaged or malfunction if it is used outside the range of specifications of current load, voltage, temperature or impact.

② Take precautions when multiple cylinders are used close together.

When multiple auto switch cylinders are used in close proximity, magnetic field interference may cause the switches to malfunction. Maintain a minimum cylinder separation of 40mm. (When the allowable separation is indicated for each cylinder series, use the specified value.)

③ Pay attention to the length of time that a switch is ON at an intermediate stroke position.

When an auto switch is placed at an intermediate position of the stroke and a load is driven at the time the piston passes, the auto switch will operate, but if the speed is too great the operating time will be shortened and the load may not operate properly. The maximum detectable piston speed is:

$$V \text{ (mm/s)} = \frac{\text{Auto switch operating range (mm)}}{\text{Time load applied (ms)}} \times 1000$$

In cases of high piston speed, the use of an auto switch (D-F5NT, F7NT, G5NT and M5IT) with a built-in OFF delay timer (approx. 200ms) makes it possible to extend the load operating time.

④ Wiring should be kept as short as possible.

<Reed switch>

As the length of the wiring to a load gets longer, the rush current at switching ON becomes greater, and this may shorten the product's life. (The switch will stay ON all the time.)

- 1) For an auto switch without a contact protection circuit, use a contact protection box when the wire length is 5m or longer.
- 2) Even if an auto switch has a built-in contact protection circuit, when the wiring is more than 30m long, it is not able to adequately absorb the rush current and its life may be reduced. It is again necessary to connect a contact protection box in order to extend its life. Please contact SMC in this case.

<Solid state switch>

- 3) Although wire length should not affect switch function, use a wire 100m or shorter.

⑤ Take precautions for the internal voltage drop of the switch.

<Reed switch>

- 1) Switches with an indicator light Except (D-A56, A76H, A96, A96V, C76 and E76A)

- If auto switches are connected in series as shown below, take note that there will be a large voltage drop because of internal resistance in the light emitting diode. (Refer to internal voltage drop in the auto switch specifications.)
[The voltage drop will be "n" times larger when "n" auto switches are connected.]
Even though an auto switch operates normally, the load may not operate.

- In the same way, when operating under a specified voltage, although an auto switch may operate normally, the load may not operate. Therefore, the formula below should be satisfied after confirming the minimum operating voltage of the load.

$$\frac{\text{Supply voltage} - \text{Internal voltage}}{\text{drop of switch}} > \frac{\text{Minimum operating voltage of load}}{\text{voltage of load}}$$

- 2) If the internal resistance of a light emitting diode causes a problem, select a switch without an indicator for right (MODEL D-A6□, A-80, A80H, A90, A90V, C80, R80, 90, E80A and Z80)

<Solid state switch>

- 3) Generally, the internal voltage drop will be greater with a 2 wire solid state auto switch than with a reed switch. Take the same precautions as in 1).
Also, note that a 12VDC relay is not applicable.

⑥ Pay attention to leakage current.

<Solid state switch>

With a 2 wire solid state auto switch, current (leakage current) flows to the load to operate the internal circuit even when in the OFF state.

$$\text{Operating current of load (OFF condition)} > \text{Leakage current}$$

If the criteria given in the above formula are not met, it will not reset correctly (stays ON). Use a 3 wire switch if this specification will not be satisfied.

Moreover, leakage current flow to the load will be "n" times larger when "n" auto switches are connected in parallel.

⑦ Do not use a load that generates surge voltage.

<Reed switch>

If driving a load such as a relay that generates a surge voltage, use a switch with a built-in contact protection circuit or use a contact protection box.

<Solid state switch>

Although a zener diode for surge protection is connected at the, output side of a solid state auto switch, damage may still occur if the surge is applied repeatedly. When a load, such as a relay or solenoid, which generates surge is directly driven, use a switch with a built-in surge absorbing element.

⑧ Cautions for use in an interlock circuit.

When an auto switch is used for an interlock signal requiring high reliability, devise a double interlock system to avoid trouble by providing a mechanical protection function, or by also using another switch (sensor) together with the auto switch. Also perform periodic maintenance and confirm proper operation.

⑨ Ensure sufficient clearance for maintenance activities.

When designing an application, be sure to allow sufficient clearance for maintenance and inspections.

Auto Switch Precautions②

Be sure to read before handling.

Refer to main text for detailed precautions on every series.

Mounting & Adjustment

⚠ Warning

① Do not drop or bump.

Do not drop, bump or apply excessive impacts (300m/s² or more for reed switches and 1000m/s² or more for solid state switches) while handling.

Although the body of the switch may not be damaged, the inside of the switch could be damaged and cause a malfunction.

② Do not carry a cylinder by the auto switch lead wires.

Never carry a cylinder by its lead wires. This may not break the lead wires, but it may cause internal elements of the switch to be damaged by the stress.

③ Mount switches using the proper fastening torque.

When a switch is tightened beyond the range of fastening torque, the mounting screws, mounting bracket or switch may be damaged. On the other hand, tightening below the range of fastening torque may allow the switch to slip out of position. (Refer to switch mounting for each series regarding switch mounting, moving, and fastening torque, etc..)

④ Mount a switch at the center of the operating range.

Adjust the mounting position of an auto switch so that the piston stops at the center of the operating range (the range in which a switch is ON). (The mounting position shown in a catalog indicates the optimum, position at stroke end.) If mounted at the end of the operating range (around the borderline of ON and OFF), operation will be unstable.

Wiring

⚠ Warning

① Avoid repeatedly bending or stretching lead wires.

Broken lead wires will result from applying bending stress or stretching forces to the lead wires.

② Be sure to connect the load before power is applied.

<2 wire type>

If the power is turned ON when an auto switch is not connected to a load, the switch will be instantly damaged because of excess current.

③ Confirm proper insulation of wiring.

Be certain that there is no faulty wiring insulation (contact with other circuits, ground fault, improper insulation between terminals, etc.). Damage may occur due to excess current flow into a switch.

④ Do not wire with power lines or high voltage lines.

Wire separately from power lines or high voltage lines, avoiding parallel wiring or wiring in the same conduit with these lines. Control circuits, including auto switches, may malfunction due to noise from these other lines.

⑤ Do not allow short circuit of loads.

<Reed switch>

If the power is turned ON with a load in a short circuit condition, the switch will be instantly damaged because of excess current flow into the switch.

<Solid state switch>

Model D-F9□(Y), F9□W(V), J51, G5NB and all models of PNP output switches do not have built-in short circuit prevention circuits. If loads are short circuited, the switches will be instantly damaged. Take special care to avoid reverse wiring with the brown (red) power supply line and the black (white) output line on 3 wire type switches.

⑥ Avoid incorrect wiring.

<Reed switch>

A 241V DC switch with indicator light has polarity. The brown lead wire or terminal No.1 is (+), and the blue lead wire or terminal No.2 is (-).

[In the case of model D-97, the side without indicator is (+), and the black line side is (-).]

1) If connections are reversed, a switch will operate, however, the light emitting diode will not light up.

Also note that a current greater than that specified will damage a light emitting diode and it will no longer operate.

Applicable models:

D-A73, A73H, A73C, C73, C73C, E73A, Z73, R73

D-97, 93A, A93, A93V

D-A33, A34, A33A, A34A, A44, A44A

D-A53, A54, B53, B54

2) However, when using a two color indication auto switch (D-A79W, A59W, B59W), be aware that the switch will constantly remain ON if the connections are reversed.

<Solid state switch>

1) If connections are reversed on a 2 wire type switch, the switch will not be damaged if protected by a protection circuit, but the switch will always stay in an ON state. However, it is still necessary to avoid reversed connections, since the switch could be damaged by a load short circuit in this condition.

2) If connections are reversed (power supply line + and power supply line -) on a 3 wire type switch, the switch will be protected by a protection circuit. However, if the power supply line (+) is connected to the blue (black) wire and the power supply line (-) is connected to the black (white) wire, the switch will be damaged.

* Lead wire color changes

Lead wire colors of SMC switches and related products have been changed in order to meet NECA (Nippon Electric Control Equipment Industries Association) Standard 0402 for production beginning September, 1996 and thereafter. Please refer to the tables provided. Special care should be taken regarding wire polarity during the time that the old colors still coexist with the new colors.

2 wire

	Old	New
Output (+)	Red	Brown
Output (-)	Black	Blue

Solid state with diagnostic output

	Old	New
Power supply	Red	Brown
GND	Black	Blue
Output	White	Black
Diagnostic output	Yellow	Orange

3 wire

	Old	New
Power supply	Red	Brown
GND	Black	Blue
Output	White	Black

Solid state with latch diagnostic output

	Old	New
Power supply	Red	Brown
GND	Black	Blue
Output	White	Black
Latch diagnostic output	Yellow	Orange

Auto Switch Precautions③

Be sure to read before handling.

Refer to main text for detailed precautions on every series.

Operating Environment

⚠ Warning

❶ Never use in an atmosphere with explosive gases.

The structure of auto switches is not designed to prevent explosion. Never use in an atmosphere with an explosive gas since this may cause a serious explosion.

❷ Do not use in an area where a magnetic field is generated.

Auto switches will malfunction or magnets inside cylinders will become demagnetized. (Consult SMC regarding the availability of a magnetic field resistant auto switch.)

❸ Do not use in an environment where the auto switch will be continually exposed to water.

Although switches except D-A3□/A44□/G39□/K39□ satisfy the IEC standard IP67 structure (JIS C 0920: anti-immersion structure), do not use switches in applications where continually exposed to water splash or spray. Poor insulation or swelling of the potting resin inside switches may cause malfunction.

❹ Do not use in an environment with oil or chemicals.

Consult SMC if auto switches will be used in an environment with coolant, cleaning solvent, various oils or chemicals. If auto switches are used under these conditions for even a short time, they may be adversely affected by improper insulation, malfunction due to swelling of the potting resin, or hardening of the lead wires.

❺ Do not use in an environment with temperature cycles.

Consult SMC if switches are used where there are temperature cycles other than normal temperature changes, as they may be adversely affected.

❻ Do not use in an environment where there is excessive impact shock.

<Reed switch>

When excessive impact (300m/s² or more) is applied to a reed switch during operation, the contact point will malfunction and generate or cut off a signal momentarily (1ms or less). Consult SMC regarding the need to use a solid state switch depending upon the environment.

❼ Do not use in an area where surges are generated.

<Solid state switch>

When there are units (solenoid lifter, high frequency induction furnace, motor, etc.) which generate a large amount of surge in the area around cylinders with solid state auto switches, this may deteriorate or damage to the switch. Avoid sources of surge generation and disorganized lines.

❽ Avoid accumulation of iron powder or close contact with magnetic substances.

When a large amount of ferrous powder such as machining chips or spatter is accumulated, or a magnetic substance is brought into close proximity with an auto switch cylinder, it may cause the auto switch to malfunction due to a loss of the magnetic force inside the cylinder.

Maintenance

⚠ Warning

❶ Perform the following maintenance periodically in order to prevent possible danger due to unexpected auto switch malfunction.

1) Secure and tighten switch mounting screws.

If screws become loose or the mounting, position is dislocated, retighten them after readjusting the mounting position.

2) Confirm that there is no damage to lead wires.

To prevent faulty insulation, replace switches or repair lead wires, etc., if damage is discovered.

3) Confirm the lighting of the green light on the 2 color indicator switch.

Confirm that the green LED is on when stopped at the established position. If the red LED is on, the mounting position is not appropriate. Readjust the mounting position until the green LED lights up.

Other

⚠ Warning

❶ Consult SMC concerning water resistance, elasticity of lead wires, and usage at welding sites, etc.

Pneumatics Symbols

DIN ISO1219-1, 03/96. Graphic symbols for pneumatic equipment.

Circuit symbols are used through this catalogue and on the labels of most SMC Pneumatic products.

There are several symbol systems and conventions in use around the world, most officially recognised by standards bodies. Commonly used is ISO1219-1.

The symbols found in this catalogue generally conform to the Japanese Industrial Standard (JIS) in many cases, there is no difference between JIS and ISO circuit symbols.

The situation also occurs when SMC develop new product systems for which an ISO or JIS symbol does not exist. Examples include the MGZ high power cylinder or the AV series air operated soft start / release valve. In this situation either a composite symbol showing a representative circuit is used, or the nearest standard symbol is modified by SMC.

For assistance a table below shows both ISO symbols, which may differ from JIS symbols in this catalogue, and common ISO/JIS/SMC Symbols.

Volume 1

Symbol	Description
	Directional control valve 2/2-way valve, closed normal position
	Directional control valve 2/2-way valve, open normal position
	Directional control valve 3/2-way valve, closed normal position
	Directional control valve 3/2-way valve, open normal position
	Directional control valve 3/3-way valve, closed neutral position
	Directional control valve 4/2-way valve
	Directional control valve 4/2-way valve, closed neutral position
	Directional control valve 4/2-way valve, exhaust neutral position
	Directional control valve 5/2-way valve
	Directional control valve 5/3-way valve, closed neutral position

Symbol	Description
	Directional control valve 5/3-way valve, exhaust neutral position
	Directional control valve 5/3-way valve, open neutral position

	Filter with water trap, automatic
	Water trap with automatic drain
	Mist separator
	Micro mist separator
	Lubricator
	Dryer
	Cooler
	Pneumatic pressure gauge

Symbol	Description
	Air preparator, Service unit (simplified graph)
	Air combination, Air filter, regulator and Lubricator
	Air combination, Air filter and regulator
	Air combination, Air filter, mist separator and regulator
	Air combination, Mist separator, regulator and pressure gauge
	Pneumatic booster regulator, handle operated
	Adjustable pressure switch
	Non adjustable pressure switch
	Pneumatic capacitor
	Non-return valve, without spring

ISO/VDMA Cylinders
